#### Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language oftheir choice. To this end, the Agency has developed standards of service that its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1 800 263-1136. The service standards are also published on www.statcan.ca under About Statistics Canada > Providing services to Canadians.

#### Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

#### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published

#### 1. Introduction

The 2001 Aboriginal Peoples Survey (APS) was conducted by Statistics Canada to collect data on the lifestyles and living conditions of Aboriginal people in Canada. The survey was designed and implemented in partnership with national Aboriginal organizations.

This is the second time the Aboriginal Peoples Survey has been carried out by Statistics Canada; the first time was in the fall of 1991. The data from the 1991 APS were widely used. An extremely important user of the 1991 data was the Royal Commission on Aboriginal Peoples (RCAP). They used the data as a primary source of demographic, social and economic data for their final report and related research studies. The Commission's final report recommended that APS be conducted regularly to monitor the demographic and social conditions of Aboriginal peoples.

The federal government responded to the RCAP recommendations through its Aboriginal action plan, Gathering Strength. In this plan the need for relevant and current data was recognized under the umbrella of developing a new fiscal relationship. Statistics Canada was mandated through Gathering Strength to coordinate a second Aboriginal Peoples Survey shortly after the 2001 Census.

This document was developed in order to facilitate the use of the Aboriginal Peoples Survey's Adults off-reserve Public Use Microdata File (PUMF). It describes the survey, its methodology, data quality, and other issues related to data analysis and dissemination. It also describes how to use the PUMF correctly.

The PUMF should be used together with the data dictionary, which includes the survey questions, derived variables, and frequency distributions of all the variables. For more information on the concepts and methods used for the Aboriginal Peoples Survey; the Aboriginal Peoples Survey: Concepts and Methods Guide, a free publication, may be consulted (see Section 7 (Other APS Products)).

Any additional questions about the APS PUMF or its use should be directed to:

#### The off-reserve population

The off-reserve population excludes people living on Indian reserves. It makes up 80% of the total Aboriginal population in Canada, and includes people who live in Canada's largest cities, other urban areas, rural areas and in the Canadian Arctic.

Off-reserve population refers to those living outside of most First Nation or Band affiliated communities, such as Indian Reserves, Indian Settlements, Indian Government District, Terres Réservées, Nisga'a Villages, Teslin Lands and a set of communities which Indian and Northern Affairs Canada (INAC) designates as Band-affiliated communities. See the *2001 Census Dictionary* for a full definition of these communities. However, for the purposes of this product, the total Aboriginal population of the Northwest Territories is included, i.e. those residing in both reserve and off-reserve areas in the Northwest Territories. For the purposes of this product, the following communities (listed with their census geographic designation) are considered as part of the off-reserve population:

- In Québec, Chisasibi (Terres Reservées)
- In Saskatchewan: Deschambault Lake (Northern Hamlet), La Loche (Northern Village), Pinehouse (Northern Village), Sandy Bay (Northern Village)
- In Alberta: Fort Mackay (Indian Settlement)
- In the Yukon Territory: Pelly Crossing (Settlement), Old Crow (Settlement) and Ross River (Settlement)

Unlike the Métis and Inuit, a significant number of North American Indian people live on Indian reserves (First Nation communities). There are some differences in characteristics between the North American Indian population living in reserve communities and those living in off-reserve areas. For example, a higher percentage of people living in reserve communities can speak an Aboriginal language. Therefore, it is important to note that the PUMF focuses only on the off-reserve population.

#### 2. Survey description

#### 2.1 Survey objectives

The primary objective of the 2001 APS was to provide data on the social and economic conditions of Aboriginal people in Canada. More specifically, its purpose was to identify the needs of Aboriginal people and focus on issues such as health, language, employment, income, schooling, housing, and mobility. Indeed, there are large gaps in the data that presently exist for Aboriginal people. The 2001 APS was designed to address some of these gaps. This is information that cannot be found anywhere else and it can be used to answer a wide range of questions related to things like community planning, program development and health care priorities. Over 122,000 people were targeted for the 2001 survey and information on a broad range of topics is available.

#### 2.2 Survey development

#### 2.2.1 Content consultation

Consultation and collaboration with Aboriginal people on the content for the survey was essential. The objectives of content consultation were outlined as follows:

- Raise awareness of the potential uses of data and identify data needs of various Aboriginal groups
- Make organizations aware of the benefits of participating in 2001 APS, i.e. participation in all aspects of the survey, training opportunities, input on type of data required and methodology
- Establish a better working relationship between Statistics Canada and Aboriginal groups and lay the groundwork for further involvement of Aboriginal people and organizations in survey activity in the future
- Develop options for carrying out the survey, sharing the data, and analyzing the results
- Identify parameters of the survey, e.g. level of geographic aggregation desired, national standard content versus regional adaptations, extent of need for data on families/households as opposed to individuals, and types of feedback desired
- Obtain suggestions on format of further consultations with regional/provincial affiliates
- Solicit feedback with regard to the previous APS, areas of interest that were omitted, groups that were not represented, issues that may be unique to each Aboriginal group, with a view to improving the 2001 APS.

There were three main groups of stakeholders consulted, namely, Aboriginal groups, communities and organizations; federal government departments that provide programs or develop policy for Aboriginal people; and provincial and territorial governments. In addition, a number of groups or individuals, such as academics and Aboriginal groups not affiliated with the large organizations, were given the opportunity to comment on the plans via an APS web board.

#### 2.2.2 Partnerships

Statistics Canada is committed to working closely with Aboriginal peoples, and it was essential that representatives of Aboriginal organizations be involved in all aspects of the design and implementation of the 2001 APS. It was with this in mind that an Implementation Committee was created.

The APS Implementation Committee (IC) is a unique forum bringing together representatives from national Aboriginal organizations, federal departments, provinces and territories. Through consultation with their constituencies and the expertise of the members of the IC, APS was designed to provide relevant and legitimate data to its main stakeholders.

#### 2.3 Questionnaire content

As mentioned above, the Aboriginal Peoples Survey was designed to collect data on the lifestyles and living conditions of Aboriginal people across Canada. The content of APS was designed in cooperation with national Aboriginal organizations.

The portion of the survey covering the adult Aboriginal population was comprised of the following questionnaires:

- Adult core, which was administered to the Aboriginal adult population (15 years and over), and which included questions on education, language, labour activity, income, health, communication technology, mobility and housing.
- **Arctic supplement**, which was administered to the Aboriginal adult population (15 years and over) residing in Inuit communities. This supplement contained questions on household and harvesting activities, personal wellness, and community wellness and social participation.
- Métis supplement, which was administered only to the Aboriginal adult population (15 years and over) who self-identified as Métis and/or who had Métis ancestry. This portion of the survey was not conducted on-reserve or in Inuit communities. This supplement contained questions on family background, household information, cultural background and health.

#### 3. Survey design

#### 3.1 Target population

APS covered residents of private dwellings in the 10 provinces and 3 territories. All residents of collective dwellings<sup>1</sup> were excluded from the survey.

APS is a post-censal survey, meaning that respondents were selected based upon their responses to the 2001 Census, which took place on May 15, 2001. Four questions from the Long Questionnaire (Form 2B – given to every fifth household in Canada) and the Northern and Reserves Questionnaire (Form 2D – given to everyone in First Nations, reserve communities and northern areas) were used to determine the APS target population. The tables below show these questions.

CENSUS QUESTION	ABORIGINAL IDENTITY POPULATION
Question 18 (2B)	
Is this person an Aboriginal person, that is, North American Indian, Métis or Inuit (Eskimo)?	Respondents mark a circle to indicate "Yes, North American Indian", "Yes, Métis" and/or "Yes, Inuit". This question is commonly referred to as the "Aboriginal self reporting" question. It is the main component that defines the "Aboriginal identity population".
Question 18 (2D)  Is this person an Aboriginal person, that is, North American Indian, Métis or Inuit?	In the 2001 Census, approximately 975,000 Canadians reported themselves as being Aboriginal.
Question 20 (2B and 2D)  Is this person a member of an Indian Band/First Nation?	The "Aboriginal identity" population also includes respondents who marked a "yes" to Question 20.
Question 21 (2B and 2D)  Is this person a Treaty Indian or a Registered Indian as defined by the Indian Act of Canada?	The "Aboriginal identity" population also includes respondents who marked a "yes" to Question 21.

-

<sup>&</sup>lt;sup>1</sup> Collective dwellings include lodging or rooming houses, hotels, motels, tourist homes, nursing homes, hospitals, staff residences, communal quarters (military camps), work camps, jails, missions, group homes and so on.

CENSUS QUESTION	ANCESTRY (ORIGIN) POPULATION
Question 17 (2B)  To which ethnic or cultural group(s) did this person's ancestors belong? For example, Canadian, French, English, Chinese, Italian, German, Scottish, Irish, Cree, Micmac, Métis, Inuit (Eskimo), East Indian, Ukrainian, Dutch, Polish, Portuguese, Filipino, Jewish, Greek, Jamaican, Vietnamese, Lebanese, Chilean, Somali, etc.	Respondents were asked to write in their ancestral origins in the fill-in boxes provided. They could specify as many groups as applicable. If at least one of the groups listed was an Aboriginal group, they were included in the APS target population.  Respondents who report Aboriginal origins comprise the population commonly referred to as the "Aboriginal ancestry" or "Aboriginal origin" population. The inclusion of the Aboriginal ancestry population in APS is a departure from the first APS conducted in 1991, which focused only on the "Aboriginal identity" population.
Question 17 (2D)	In the 2001 Census, approximately 1.3 million Canadians reported having some Aboriginal ancestry.
To which ethnic or cultural group(s) did this person's ancestors belong? For example, Cree, Ojibway, Micmac, Dene, Blackfoot, Inuit, Métis, Canadian, French, English, German, etc.	

#### 3.2 Reference period and data collection

The Aboriginal Peoples Survey's reference period corresponds to that of the data collection, which took place between September 2001 and June 2002.

Collection for the 2001 APS was conducted in two phases:

- Phase I, which took place from October to December 2001, focused on the "Aboriginal identity population" or the "identity population". This population is defined as all individuals with a positive answer to question 18 or question 20 or question 21.
- Phase II, which took place from April to June 2002, focused on the "Aboriginal origin only population" or the "origin only population". This population consists of people who reported in question 17 that they had Aboriginal ancestry, but who did not report Aboriginal identity in question 18 or Band/First Nation membership in question 20 or Treaty or Registered Indian status in question 21. A small portion of the Aboriginal identity population was also covered in Phase II.

The Phase I sample used both a personal interview and telephone interview approach. The Phase II sample relied strictly on telephone interviewing.

The average length of an APS interview was 30 minutes for the core portion, 30 minutes for the Métis supplement and 20 minutes for the Arctic supplement. Proxy (or third person) responses

were permitted in special circumstances. In addition to being conducted in English and French, interviews were administered in several Aboriginal languages.

#### 3.3 Sample design

The Aboriginal Peoples Survey is a probabilistic survey, which means that a random sample was selected to represent the target population.

Two sample designs were used in Phase I, one for Aboriginal people living "on-community" and another one for Aboriginal people living "off-community". The term "on-community" includes the following participating communities:

- 123 First Nations communities (reserves)
- 53 Inuit Communities in Arctic regions
- 38 communities with a minimum Aboriginal population of 250 with a concentration of 40% or more Aboriginal people. 28 of these (including 8 Métis settlements in Alberta) have high concentrations of Métis people
- 5 additional communities with a large number of Aboriginal people (Prince Albert, North Battleford, Wood Buffalo, Yellowknife and Whitehorse).

The term "off-community" excludes the areas mentioned above and consists of all other nonreserve rural and urban areas.

Two similar sample designs were used in Phase II, one for the origin only population and one for the identity population. Phase II focused on people who reported having Aboriginal ancestry, but who did not report having Aboriginal identity. A small portion of the Aboriginal identity population was also covered in Phase II to complete the identity sample. (The EAs² with no projected Aboriginal people or ones in which the Aboriginal population make up a small percentage of the total population had not been sampled at Phase I in order to reduce the manual operations at the time of sample selection. This population was covered in Phase II.) Phase II sampled only Aboriginal people living off-community, with the exception of five Aboriginal communities (Whitehorse, Yellowknife, Prince Albert, Wood Buffalo, and North Battleford) in which the population with Aboriginal ancestry that does not identify is very large.

#### Phase I – On-community

The sampling design for all communities can be described as a two-phase stratified design. The 2001 Census long-form sample was used in the first phase to identify Aboriginal people. Individuals were divided into groups ("strata") by cross-classifying the communities by adults and children. In the second phase, a sample was selected in each stratum using a systematic random sampling design. (Systematic sampling involves the selection of units from a list using a preset selection interval.)

#### Phase I – Off-community

The sample design for the Phase I – Off-community portion can be considered a two-stage stratified design. In the first stage, EAs or groups of EAs (primary sampling units (PSUs)) were selected. In the second stage, all long-form respondents (in the Aboriginal group for which the PSU was selected in the first stage) were selected. The sample was stratified by what is called the "domains of estimation". The domains of estimation correspond to geographical regions for which estimates with an "acceptable" level of precision for a particular Aboriginal group (i.e. North American Indian, Métis, and Inuit) are required. Once the strata/domains had been

<sup>&</sup>lt;sup>2</sup> An enumeration area (EA) is the geographic area canvassed by one census representative. An EA is composed of one or more adjacent blocks. EAs cover all the territory of Canada.

defined, a sample of PSUs was selected within each domain using proportional to size sampling (PPS). Using this method, the probability of selection of a PSU is proportional to its size (or its predicted size). Note that EAs containing a small number of Aboriginal people were grouped into PSUs while EAs with large concentrations formed a PSU on their own. A number of PSUs for each Aboriginal group were selected. This method is efficient for controlling the sample size in terms of number of Aboriginal people selected and has the advantage of concentrating the sample in the larger PSUs, which reduces the collection cost. Some PSUs were so large that they were sampled with certainty. This had the effect of reducing the sampling variability.

#### Phase II

The non-edited Census base was available to select the sample for Phase II. This portion of the survey used a two-phase stratified sample design. The first phase consisted of sampling about one in five households in each EA and the second phase consisted of taking a subsample of Aboriginal people selected in the first phase. The stratification used differed for the ancestry and identity samples and consisted of combinations of Aboriginal groups, subprovincial or provincial regions and adults/children. A systematic sample was taken independently from each stratum after the individuals had been sorted according to key variables such as subprovincial region (when the stratum was the province), age group, gender, and so on.

The PUMF covers the off-reserve adult Aboriginal population only, that is, people living either on- or off-community, but not in a First Nation community or reserve (see box on page 3). First Nation communities (reserves) were excluded from the PUMF for two reasons:

- Because of confidentiality concerns, it would have been impossible to include an indication
  of the First Nations community (reserve) which eliminates the possibility of doing analysis at
  the community level;
- Because of cost constraints, the sampling strategy focused on the larger reserves in each province, and hence these were not representative of the entire on-reserve population.

#### 3.4 Sample size and response rate

For the on-community portion of 2001 APS, a targeted minimum proportion of 10% with a maximum CV of 25% was fixed for the adults. The strategy was then to estimate the number of adults required in the sample in order to meet these requirements and apply the same sampling fraction to the children. Note that because the number of children is smaller than the number of adults for most, if not all communities, less precision was achieved for the children. The sample size also considered expected levels of response. Projected response rates ranged from 75% on First Nations reserves to 90% in Inuit communities. Since observed response rates were often larger then what had been anticipated, more precise data was obtained for certain communities. One exception to the sample size determination was for the communities with high concentrations of Métis people. Since the survey needed to provide estimates for all Aboriginal people in the community as well as for the Métis only population, a larger sampling fraction was required.

As for the on-community portion, the off-community sample size was calculated based on a desired level of precision for a given minimum proportion. For Inuit living off-community (very small population), only Canada level estimates were targeted. Provinces with a large number of North American Indians and Métis were stratified by main census metropolitan areas (Montréal, Ottawa-Gatineau, Toronto, Winnipeg, Regina, Saskatoon, Calgary, Edmonton and Vancouver), "other urban" and "other rural" for both groups. Within each domain of estimation (e.g. North American Indians living in Calgary), the targeted minimum proportion was 7.5% with a CV that

varied according to the size of the domain of estimation (between 20% and 33%). Small CVs were targeted for large domains whereas large CVs were targeted for small domains.

The following tables show sample sizes and response rates for each phase and province.

Table 1a: Sample size and response rates by phase

Phase	Sample size	Number of respondents	Response rate (%)
Phase I – On-community	57,560	50,594	87.9
Phase I – Off-community	45,710	38,464	84.1
Phase II	13,971	9,591	68.6
Total	117,241	98,649	84.1

The difference in response rates between the Phase I and Phase II sample deserves comment. A number of factors contributed to the difference in rates, namely:

- The Phase II sample relied strictly on telephone interviewing, whereas the Phase I sample used both a personal interview and telephone interview approach.
- The non-contact rate was 2.4 times higher in Phase II than in Phase I. The tracing of respondents was much more difficult in Phase II because it took place about a year after the Census, compared to Phase I which took place only four months after Census.
- The sample for Phase I consisted of persons who consider themselves to be Aboriginal
  while the Phase II sample consisted primarily of those with Aboriginal origins. The refusal
  rate was three times higher in Phase II than in Phase I. This could be because the origin
  only population felt less connected to a survey on Aboriginal people than the identity
  population.

Table 1b: Sample size and response rates by province

Province	Sample size	Number of respondents	Response rate (%)
Newfoundland and Labrador	3,744	3,115	83.2
Prince Edward Island	576	476	82.6
Nova Scotia	2,329	1,908	81.9
New Brunswick	2,102	1,732	82.4
Quebec	8,055	6,562	81.5
Ontario	11,865	9,280	78.2
Manitoba	17,181	15,052	87.6
Saskatchewan	23,016	20,296	88.2
Alberta	19,899	16,939	85.1
British Columbia	15,148	12,064	79.6
Yukon	2,265	1,716	75.8
Northwest Territories	5,384	4,912	91.2
Nunavut	5,677	4,597	81.0
Total	117,241	98,649	84.1

The final APS sample included 117,421 persons. Of these, 98,649 responded to the survey. This represents a total response rate of 84.1%.

#### 4. Data processing

#### 4.1 Data capture

Data capture was carried out at the head office in Ottawa. Two methods, optical character recognition (scanning) and key entry, were used to capture the questionnaires. The following steps were taken to improve the quality of the captured data. Write-in responses were manually captured. Questionnaires that had originally been scanned were recaptured using key entry when data quality fell below acceptable standards. As well, some abnormalities created by the optical reading system were identified and corrected during editing.

#### 4.2 Editing

The first stage of error detection was done during the data collection. Interviewers were asked to check their questionnaires page by page ensuring that everything had been filled in correctly and clearly and to ensure that skips had been followed correctly. In cases where questions were incorrectly missed, they were instructed to contact the respondent again to obtain the missing information.

The second stage of survey processing involved editing all the survey records according to prespecified edit rules to check for errors, gaps and inconsistencies in the survey data. Validity checks on each variable were made to ensure, for example, that numerical answers to certain questions fell within acceptable logical ranges and that invalid multiple responses to certain questions were identified. Checks were also made to ensure that the questionnaire flows were followed properly and that portions of the questionnaire that were to be skipped in the interview because of a previous answer were in fact skipped. Inconsistencies between sections of the questionnaire or with the Census were not corrected. It was felt that it would be inappropriate for Statistics Canada to choose one response over the other.

Where errors were found, the erroneous information was either blanked out, replaced by a "not stated" or "invalid" code, or corrected based on the answers to other questions. Although the corrections were generally done in an automated way, analysts reviewed some problematic situations.

Finally, a macro-level verification was done by analyzing frequency distributions to identify anomalies (for example, missing categories or unusually large frequencies).

#### 4.3 Coding

For questions for which it was possible to develop a written answer, responses were assigned either a code representing a new category or the code for a category listed on the questionnaire if the information fell into an existing category. Where applicable, responses were coded according to appropriate classification systems, for example, NOCS 2001.

#### 4.4 Definition of response status

One of the preliminary steps of the weighting process was to verify outcome codes in order to assign a response status to each sampling unit. In order to do this, there had to be a record for each person selected in the sample. Then, each record was assigned one of the following statuses:

- complete response: The core questionnaire was divided into 8 sections, the Arctic supplement into 3 sections and the Métis supplement into 4 sections. A priority question was identified in each of these 15 sections. A record received the complete response status when at least half of the priority questions were answered in at least one of the core questionnaire, Arctic supplement or Métis supplement.
- 2. total non-response: no data, or almost no data, were gathered for a sampling unit. In APS, a record received the total non-response status when a valid response was provided for less than half the priority questions in all components of the questionnaire.
- 3. out of scope from the survey: the unit was in the survey frame but, according to information collected during the survey, the unit was not part of the target population. In the APS adult portion, persons who were out of scope were persons who no longer reported an Aboriginal identity or ancestry, were deceased, were younger than 15 years of age, were living in a collective dwelling, etc.

Units considered to be "total non-response" or "out of scope" were removed from the final APS data files. Only respondents who were assigned the "complete response" status are included on the APS files.

#### 4.5 Creation of combined and derived variables

Some variables in the file were derived from information collected on the questionnaire. In some cases, derived variables are simple ones formed by grouping several categories. In other cases, two or more variables were combined to create a new one. The data dictionary specifies which variables are derived and how this was done.

#### 4.6 Level of detail on the microdata file

In order to ensure the non-disclosure of confidential information, the level of detail of the PUMF is not as fine as that of the master file kept by Statistics Canada. Actions were also taken to make the microdata file more secure from disclosure of confidential information. These actions concern the geography included in the file, survey weights, overlaps with other PUMFs already published, exclusion of variables, grouping of categories for some variables, capping of some extreme numerical values, as well as identification of unique records at risk and rare occurrences.

As a result, the PUMF on off-reserve Aboriginal adults contains 29,592 records. Each record represents one respondent and provides data for most sections of the questionnaire. The records each contain 677 variables: 296 variables from the Adult core questionnaire, 174 variables from the Arctic supplement, 178 variables from the Métis supplement, and 29 variables from the census.

A complete list of these variables is provided in the data dictionary.

#### 5. Estimation

In a sample survey, each respondent represents not only himself/herself, but also other persons who were not sampled. Consequently, a weight is associated with each respondent to indicate the number of persons that this respondent represents. This weight must be used for all estimations. For example, in a simple random sample of 2% of the population, each person represents 50 persons in the population. The initial weight is then adjusted for such things as non-response and discrepancies between the characteristics of the sample and known totals for the target population (post-stratification adjustment). The number of persons represented by a given respondent is what is known as the respondent's weight or weighting factor.

A weighting factor is included in the APS microdata file:

WGT\_PUMF: This is the weight for analysis with respect to persons, that is, for calculating estimates of the number of persons (included in the target population) with one or more of specified characteristics. WGT\_PUMF should be used to calculate all estimates. For example, to estimate the number of persons who are between the ages of 15 and 19, it is necessary to sum the WGT\_PUMF values for all records that include this characteristic (AGEGRP='01').

#### 5.1 Weighting

As noted above, APS 2001 was a survey of individuals, and the microdata file contains responses to the questionnaire and related information provided by 29,592 respondents.

Calculating the weight for the PUMF is a four-stage process:

#### 1) Calculating the initial weight

The first stage was the assignment of an initial weight based on the sampling design. The initial weight was simply the inverse of the inclusion probability (probability of falling in the sample).

For off-community portion of Phase I, the initial weight was the product of two components: the inverse of the primary sampling unit sampling fraction (called the PSU weight) and the Census weight. Three independent frames for North American Indians, Métis and Inuit were developed to select the sample. The PSUs were formed independently on each frame and three independent samples were selected. This means that some individuals who had multiple Aboriginal identities appeared on more than one frame. They thus had more than one chance of being selected. Since a unique survey weight was needed, the selection probabilities were adjusted to take the multiple inclusion probabilities into account. Following this calculation, individuals selected by mistake (due to the manual listing operation required) and those missed during sample selection were taken into consideration and appropriate weight adjustments were applied to the initial weight.

For the Phase I on-community sample, since sample size determination and sample selection involved manual operations as opposed to computer-based calculations, the initial weights were derived by dividing the weighted number of adults and children in each community (derived from the Census) by the number of such individuals in the sample.

For Phase II, since the selection was made directly from the Census base (i.e. no manual listing was required), the initial weight was simply the product of the Census weight and the subsample weight.

#### 2) Correction for non-response

The second stage of the weighting process was the adjustment for non-response. Two adjustments were made to account for the fact that the non-respondents can be classified into two very different categories: the persons not contacted and the persons contacted but who did not respond. The weights were adjusted first for non-contact and then for non-response. The non-response adjustment was done by forming non-response adjustment classes in such a way that the records in each class had similar response probabilities. The estimated response probabilities were obtained by developing a logistic regression model to predict the response probability using explanatory variables.

#### 3) Post-stratification

The third stage of the weighting adjustment was the post-stratification. This adjustment ensures that the sum of the final weights for the respondents is equal to the population counts from the Census. The adjustment was done for groups (called post-strata) defined by the combination of several variables.

For APS, two consecutive post-stratifications were completed. The first used (among other information) each respondent's answer to Census questions 17, 18, 20 and 21 (Census filter questions) to create post-strata. The weights, which had been corrected for non-response, were adjusted using the ratio of the Census count to the sample count for each post-stratum. This first post-stratification was aimed at ensuring that the sample did not under or over represent Census Aboriginal groups. Since answers to the screening (filter) questions can differ between APS and Census, a second post-stratification was carried out to guarantee that the total Aboriginal population, as estimated from the APS filter questions, matched those estimated from the Census filter questions. Adjustments were not made by Aboriginal group but rather for the total Aboriginal population (identity or origin).

#### 4) Additional adjustments of weights for the PUMF

The PUMF is a subsample of the APS adult sample. Thus, additional adjustments had to be made to the weights of units in the PUMF to take account of the units removed. To do this, the weight obtained in stage 3 was first multiplied by the subsampling weight. Then a new post-stratification was needed in order to adjust the census counts. Finally, some random noise was added to the resulting weight as an additional measure to ensure confidentiality.

#### 5.2 Weighting guidelines

Thus, the final weight assigned to each respondent underwent numerous adjustments so that respondents would better represent the target population. Weighting of the data ensured that the APS PUMF sample is representative of the target population even if the sampling ratio differs widely from one individual to another. The use of the weights is then essential for all analyses that use the survey data.

Users should not disseminate any unweighted total or perform analyses based on unweighted survey results. Sampling rates and non-response rates vary considerably from one stratum to another, and non response rates also vary according to demographic characteristics. Clearly, therefore, unweighted sample counts cannot be considered as representative of the population targeted by the survey.

#### 5.3 Types of estimation

Using APS data, two types of "simple" estimates can be calculated: qualitative estimates (estimates of numbers or proportions of persons with certain attributes or characteristics) and quantitative estimates (estimates of quantities or averages).

#### 5.3.1 Qualitative estimates

Qualitative estimates are estimates of the number or percentage of persons in the population targeted by the survey who have a certain characteristic or fall into a defined category. The values of these variables represent a quality rather than a quantity. An example of a qualitative estimate is the number or proportion of persons who reported "High school diploma" as the highest level of schooling completed.

Qualitative estimates can be obtained by summing the final weights of all records that contain the characteristic(s) of interest. Proportions and ratios of the form  $\hat{Y}/\hat{W}$  are obtained by following the steps below:

- (i) sum the final weights of records containing the characteristic of interest in the population or in a domain of interest to get  $\hat{Y}$ ;
- (ii) sum the final weights of all records in the population or in the same domain of interest to get  $\hat{W}$ :
- (iii) divide the result obtained in (i) by the result obtained in (ii), namely Ŷ/Ŵ.

#### 5.3.2 Quantitative estimates

Quantitative estimates are estimates of totals or means, medians or other measures of central tendency representing quantities. The number of weeks or hours worked is an example of a quantitative estimate.

This type of estimate can be obtained by multiplying the value of the variable of interest by the final weight of the corresponding record and summing this amount for all records selected. To obtain a weighted average of the form  $\hat{Y}/\hat{W}$ , the numerator  $(\hat{Y})$  is calculated in the same way as a quantitative estimate and the denominator  $(\hat{W})$  in the same way as a qualitative estimate. For example, to estimate the average number of hours worked by respondents, proceed as follows:

- (i) estimate the total number of hours worked by respondents  $(\hat{Y})$  by multiplying the number of hours worked by each respondent by its corresponding final weight, then sum this value for all respondents;
- (ii) estimate the number of respondents (Ŵ) by summing the final weights for all records corresponding to a respondent;
- (iii) divide the result obtained in (i) by the result obtained in (ii), namely Ŷ/Ŵ.

#### 5.4 Guidelines for analysis

#### 5.4.1 Using survey weights

As explained in detail in Section 3.3, APS respondents do not constitute a simple random sample of the target population. The survey is based on a complex sampling design. Consequently, the selection of respondents was done according to unequal probabilities.

Survey weights must therefore be used in making estimates and analyses so that insofar as possible, the over- or under-representation of some groups in the unweighted file can be taken into consideration. The use of data from such a complex survey can pose problems for analysts,

since the choice of methods of estimation and variance calculation depends on the sampling design and selection probabilities. A number of analysis methods integrated into statistical packages allow the use of weights, but the meaning and definition of these weights often differ from those that apply in the context of a sample survey. Therefore, while the estimates made using these packages are often accurate, the variances calculated are practically meaningless.

In many methods of analysis (such as linear regression, logistic regression, estimation of rates or proportions and analysis of variance), the application of current software packages can be made more meaningful by standardizing the weights that appear in the records so that the average weight is equal to 1. The results produced by traditional packages are thus more reasonable, because even though they do not always reflect the stratification and clustering in the sampling design, they take account of selection with unequal probabilities. This standardizing can be done by dividing each weight by the overall average weight before proceeding to the analysis.

For example, for an analysis of all respondents who declare Inuit identity, the procedure to follow is as follows:

- from the file, select all respondents who declared Inuit identity (IDENTGM='3');
- calculate the average value of WGT\_PUMF for all these records;
- for each of these respondents, calculate a "working" weight equal to WGT\_PUMF/ average weight;
- carry out the analysis for these respondents using the "working" weight.

Section 6 gives a more detailed description of sampling variability and data reliability, and "Appendix A: Rules for calculating approximate variance" contains the rules for obtaining the approximate variance for estimating the sampling variability of a large number of estimates of proportions.

#### 5.4.2 Response categories

Before analysis can be done, the user should be familiar with the types of answers appearing on the file:

#### Valid response:

The respondent provided an answer to a question that he/she was supposed to answer. A valid response differs from responses "Don't know" and "Refused".

#### Don't know:

The respondent did not know the answer to the question. In the APS data file, a "Don't know" response is coded as "-6" for numeric variables and the next possible value for all others (e.g. for a yes/no question, "Don't know" would be coded as "03").

#### Refused:

The respondent refused to answer the question. In the APS data file, a "Refused" answer is coded as "-7" for numeric variables and the next possible value for all others (e.g. for a yes/no question without a "Don't know" category, "Refused" would be coded as "03"; if there is a "Don't know" category, "Refused" would be coded as "04").

#### Not stated or Invalid:

A response was coded "Not stated" when the respondent was supposed to answer the question but did not.

A response was coded "Invalid" when the response was unintelligible, unreadable, was assigned more than one code, was inappropriate for that question, etc.

In the APS file, a respondent whose answer was "Not stated" or "Invalid" is assigned to code "-9" for numerical variables and "99" for all others.

#### Missina:

A "missing value" indicates that the respondent:

- 1) did not answer the entire section. In this case, all the person's responses for the section are assigned missing values.
- 2) did not have to answer the question, based on the directions in the questionnaire. For example, respondents were asked if they understood or spoke an Aboriginal language (Question 1, Section B of the adult core questionnaire). If they did, they were asked (Question 3) how well they spoke their primary Aboriginal language. A missing value was assigned to the latter question for all respondents who said they did not understand or speak an Aboriginal language.
- 3) did not have census data available due to the inability to link the respondent information to the census data base. In such a case **all** census variables for that person will be missing.

In the APS data file, a "Missing" response is coded as "-8" for numeric variables and "98" for all others, unless otherwise stated in the data dictionary.

#### • Not applicable (census variables only):

A response was coded "Not applicable" when the respondent did not have to answer the question because a particular response was given to the corresponding filter question. A filter question is the first question in a group of questions and is used to screen out respondents for whom the subsequent questions would be irrelevant.

During analysis, users will need to define their estimation domain (total population) for each variable. It will be important to consider whether or not "Don't know", "Refused", "Not stated or Invalid", "Missing" and "Not applicable" codes should be included or excluded. The inclusion or exclusion of each of these codes depends on the objective of the analysis. However, users who would like to account for partial non-response during data analysis should include the codes "Don't know", "Refused" and "Not stated or Invalid" in the domain of each variable and should exclude the codes "Missing" and "Not applicable".

Analysts who wish to produce the same figures as those already published by Statistics Canada in the analytical report *Aboriginal Peoples Survey: Well-being of the non-reserve Aboriginal population* (released on September 24, 2003) should generally exclude counts for "Missing" and "Not Applicable" from their totals.

#### 6. Guidelines on data dissemination and reliability

It is important for the user to become familiar with the content of this section before publishing or otherwise disseminating any estimate calculated using APS microdata files.

This section of the document gives guidelines that users of the microdata file must follow. Users will thus be able to obtain figures which are consistent with those produced by Statistics Canada and which conform to established guidelines on rounding and dissemination. The guidelines fall into four major categories: minimum sample size for producing estimates; sampling variability; estimation of variance; and rounding.

#### 6.1 Minimum sample size for producing estimates

The user must determine the number of records in the microdata file entering into the calculation of a particular estimate. If the number is less than or equal to 10, the weighted estimate must generally not be disseminated, regardless of its approximate coefficient of variation. If the estimate is nevertheless disseminated, this must be done with considerable caution, and the user should clearly indicate that the estimate is based on an insufficient number of records.

#### 6.2 Data quality and sampling variability

The estimates that can be derived from this survey are based on a sample of individuals. Somewhat different estimates might be obtained if a complete census had been taken using the same questionnaire, interviewers, supervisors, processing methods, etc. as those actually used. The difference between the estimates obtained from the sample and those resulting from a complete count taken under similar conditions is called the sampling error of the estimates.

Errors which are not related to sampling may occur at almost every phase of a survey. Interviewers may misunderstand instructions, respondents may make errors in answering questions, answers may be incorrectly entered on the questionnaire, errors may be introduced in the processing and tabulation of the data and so on. These are all examples of non-sampling errors.

Over a large number of observations, randomly occurring errors will have little effect on estimates. However, errors occurring systematically will contribute to biases in the survey estimates.

#### 6.2.1 Non-sampling errors

Coverage errors occur when there are differences between the target population and the population sampled. Because the APS sample is selected from those who participated in the Census, the APS information is not available for those communities that were incompletely enumerated in the Census.

Total non-response can be a major source of non-sampling error in surveys depending on the degree to which respondents and non-respondents differ with respect to characteristics of interest. Total non-response occurred if the selected individual could not be contacted or refused to participate in the survey. High response rates are essential for quality data. To reduce the number of non-response cases, the interviewers were all trained by Statistics Canada's staff, provided with detailed interviewer manuals, and were under the direction of

interviewer supervisors. Refusals were followed up by senior interviewers to encourage respondents to participate in the survey.

Partial non-response occurred if the respondent did not answer a specific question, possibly because he/she did not know the answer or the question was too sensitive. Generally, the extent of partial non-response was small in APS. Results from the pilot tests were used to evaluate potential problems and changes to the questionnaires were made. In particular, special measures were put in place to facilitate the collection of data from sensitive questions. Where required, special introductions were included (e.g. question on AIDS), "refused" categories were added and so on.

A response error occurs when the respondent misunderstands a question or the interviewer records an incorrect answer. Several procedures were taken to minimize this type of error, including interviewer training and qualitative testing of questions.

Processing errors may occur at various stages including coding, data capture and editing. Quality control procedures were applied to every stage of the data processing to minimize this type of error.

#### 6.2.2 Sampling errors

Since estimates based on a sample survey inevitably contain sampling errors, good statistical methods require researchers to inform users of the magnitude of this type of error.

Although it is not possible to obtain an exact measure of the sampling error of an estimate as defined above using the sample data alone, it is possible to estimate a statistical measure of this error, namely the standard error, using these data. Based on the standard error, confidence intervals can be obtained for estimates (not taking the effects of non-sampling errors into account) on the assumption that the distribution of the estimates around the true value of the population is normal. In these conditions, the chances that the deviation between an estimate based on the sample and the true value for the population is less than one standard deviation are 68 in 100, while the chances that it is less than two standard deviations are approximately 95 in 100, and it is virtually certain that it is less than three standard deviations.

Since the absolute size of the sampling error of an estimate is often less important than its relative size (compared to the estimate itself), the standard error is not always the best measure of sampling error. For example, a standard error of 10 for an estimate of 20 would generally indicate that the quality of the estimate is poor, while the same standard error for an estimate of 1,000 would generally indicate that the estimate is good. Consequently, the size of the sampling error is often expressed in relation to the size of the estimate, in the form of a coefficient of variation (CV). The coefficient of variation of an estimate is obtained by dividing the standard error of the estimate by the estimate itself and expressing the resulting fraction as a percentage. In the above example, the CV of the first estimate is 50% (10/20), while that of the second is 1% (10/1,000).

#### **Guidelines for dissemination of estimates**

Before disseminating and/or publishing estimates based on the microdata file, the user should consult the table below and follow the guidelines corresponding to the value of the coefficient of variation of the estimate.

Category	Coefficient of variation (%)	Guidelines		
Acceptable	0.0 – 16.5	This estimate can be used with no restriction.		
Marginal	16.6 – 33.3 (values in yellow in the CV table)	The estimate must be used carefully as it is associated with a high level of error. Every time this level occurs, the symbol "E" should be attached to the estimate in question.		
Unacceptable	Over 33.3 (values in red in the CV table)	If the value obtained for the CV is over 33.3, this information should not be disseminated. However, if the user chooses to do so, the estimate should be disseminated with the following warning: "We inform the user that <specify data="" the=""> does not meet Statistics Canada's quality standards. The conclusions drawn from this data are not reliable". Also, the symbol "F" should be attached to the estimate in question.</specify>		

Note: The sampling variability guidelines should be applied to rounded estimates. For more information, consult the publication *Statistics Canada Quality Guidelines* (http://www.statcan.ca/bsolc/english/bsolc?catno=12-539-X).

#### 6.3 Variance estimates

In order to provide estimates of sampling error for statistics produced in APS, the bootstrap method was used. This method, which is a resampling method, consists of selecting M subsamples from the main sample and producing estimates for each subsample.

The bootstrap variance estimate (the variance is a particular measure of sampling error) was calculated as the empirical variance of the *M* estimates. For each subsample, the initial weights first had to be adjusted for bootstrap subsampling which produces what is called "initial bootstrap weights". These initial bootstrap weights were then adjusted as described previously to obtain the final weights for each subsample. In other words, adjustments for individuals either missed or sampled by mistake, non-response and post-stratification were done for each subsample in almost exactly the same way as the full sample. For APS, 500 bootstrap samples were selected.

Thus, to obtain an accurate estimate of variance, the bootstrap method should be used. However, these weights cannot be provided to PUMF users for reasons of confidentiality.

Standard statistical analysis software (SAS, SPSS, etc.) do **not** have an integrated bootstrap procedure to estimate the variance when using data based on a complex survey design like APS. Therefore, when using APS data, the variance or the standard error estimates produced by standard statistical analysis software **will not** be valid and should not be used to evaluate the quality of an estimate.

The same thing can be said about the significance tests that are estimated by regular software when running a statistical analysis (regression, correlation, analysis of

variance, etc.): these measures of statistical significance should not be considered as valid when using APS data.

#### 6.3.1 Variance estimates for qualitative estimates

For most users, it would be extremely costly and pointless to calculate the sampling variability of each qualitative estimate that can be drawn from the survey. Therefore, Statistics Canada has produced approximate measures of sampling variability in the form of a table of approximate CVs, so that users can have an idea of the quality of the results they produce with the PUMF.

First, a number of variables in the file were identified that would probably be used most often in analytical tables. Approximate CVs were produced for the domains obtained by cross-tabulating these variables. For each of these domains, a total of ten proportions were simulated several times and approximate average CVs were obtained for each proportion within each domain. CVs were calculated using bootstrap weights that had been adjusted for undersampling.

In the form of an interactive EXCEL application, Statistics Canada provides a table of the approximate variance of estimates produced using WGT\_PUMF. This tool is provided free of charge to all PUMF users. For further information on how to use the CV tool, please refer to "Appendix A: Rules for calculating approximate variance".

#### 6.3.2 Variance estimates for quantitative estimates

The use of approximate variances for quantitative variables cannot be summarized as easily. However, in general, the coefficient of variation of a quantitative total will be larger than that of the corresponding qualitative estimate (for example, the number of persons whose responses are used in producing the quantitative estimate). If the sampling variability of the qualitative estimate is high, that of the estimate of the quantitative total too will generally be high.

#### 6.4 Rounding

To ensure that estimates produced from the APS microdata files will correspond to those produced by Statistics Canada, the user is strongly advised to follow the rounding guidelines. Disseminating unrounded estimates could be misleading, since such estimates might appear to be more precise than they actually are.

#### 6.4.1 Rounding guidelines

- 1) Estimates of totals that appear in the body of a statistical table should be rounded to the nearest ten by the traditional rounding method (see definition in Section 6.4.2).
- 2) Partial and grand totals in statistical tables should be calculated from their unrounded components, and then rounded to the nearest ten by the traditional rounding method.
- 3) Averages, proportions, rates and percentages should be calculated from rounded components (i.e. each component should be rounded before any calculation takes place), and then rounded to one decimal by the traditional rounding method.
- 4) Sums and differences of aggregates or ratios should be calculated from their corresponding unrounded components, and then rounded to the nearest ten or the nearest decimal using the traditional rounding method.
- 5) Because of technical or other constraints, a rounding method other than traditional rounding may be used. In this case, the estimates obtained may differ from the corresponding estimates

produced by Statistics Canada. If so, the user is strongly advised to state the reason for these differences in the document disseminated.

#### 6.4.2 Traditional rounding method

According to the traditional rounding method, if the first or only figure to be suppressed falls between 0 and 4, the last figure retained does not change. If the first or only figure to be suppressed falls between 5 and 9, the value of the last figure retained is increased by one unit (1). For example, the figure 43 rounded to the nearest ten would be 40, while the figure 45 rounded to the nearest ten would be 50.

#### 6.5 The relationship between APS and the Census

As discussed above, APS is a post-censal survey, which means that Census information was used to determine who would be included in the APS sample. More detailed information about how Census responses were used to determine the population of interest for APS is provided in section 3.

The Census and APS are both rich sources of information on Aboriginal people that complement each other. APS takes concepts that are touched on in the Census and asks questions that dig deeper in order to provide more detailed information. For example, from the Census we can find out a person's highest level of schooling. When we add information from APS, we can learn whether any of their teachers were Aboriginal, whether they received any financial assistance to pursue their post-secondary schooling or why they didn't continue their formal schooling.

APS also covers entire topics or themes that are not included in the Census. For example, through APS we can learn about the health of Aboriginal people and their use of communication technology.

Both the Census and APS conceptually cover the two types of Aboriginal populations; that is, the "identity population" and the "origin only population".

While the post-stratification (described above) ensured that the total number of people with Aboriginal origins or Aboriginal identity is the same for the Census and APS, it did not ensure the counts for the Aboriginal groups would match. Indeed, the Census and APS produce different counts at the group level. This is due to changes in the way that respondents answered questions about their Aboriginal origins and Aboriginal identity from the time of the Census to the time of APS. More information about this issue can be found in Section 9.1 of the publication Aboriginal Peoples Survey 2001: Concepts and methods guide.

#### 7. Other APS products

Additional information on the Aboriginal Peoples Survey may be obtained from Statistics Canada website at **www.statcan.ca**.

Specifically, general survey information (such as that included in this User Guide) is available at: <a href="http://www.statcan.ca/cgibin/imdb/p2SV.pl?Function=getSurvey&SDDS=3250&lang=en&db=IMDB&dbg=f&adm=8&dis=2">http://www.statcan.ca/cgibin/imdb/p2SV.pl?Function=getSurvey&SDDS=3250&lang=en&db=IMDB&dbg=f&adm=8&dis=2</a>

#### Products released as of February 2006

 Daily September 24, 2003: Well-being of the non-reserve Aboriginal population http://www.statcan.ca/Daily/English/030924/d030924b.htm

Canada's non-reserve Aboriginal population faces ongoing challenges in health, education, housing and language, according to a new report showing first results from the 2001 Aboriginal Peoples Survey (APS). Gains are being made, however, as the data for young Aboriginal people show.

• Initial findings: Well-being of the non-reserve Aboriginal Population

#### http://www.statcan.ca/english/freepub/89-589-XIE/free.htm

This report presents the initial findings of the 2001 Aboriginal Peoples Survey (APS) and focuses on the well-being of the Aboriginal identity population living in non-reserve areas across Canada. The article focuses on the health and schooling of the non-reserve Aboriginal population, in addition to providing information on housing, water quality and Aboriginal languages.

Internet community profiles

#### http://www.statcan.ca/english/freepub/89-590-XIE/free.htm

These profiles contain free information on adult and child Aboriginal identity population for selected communities in Canada where the Aboriginal identity population is 200 or more according to the 2001 Census. These communities include First Nations, Métis settlements, Inuit communities, urban centres and rural areas.

Concepts and methods guide

#### http://www.statcan.ca/english/freepub/89-591-XIE/free.htm

This guide is intended to help users understand the concepts and methods used in the 2001 Aboriginal Peoples Survey (APS), which was conducted in the fall of 2001 through the spring of 2002. Technical details on sampling, processing and data quality are also included. Further, the guide explains the relationship between APS and the 2001 Census and cautions users as to important differences in the data produced from the two sources.

Initial release - Supporting tables 1

#### http://www.statcan.ca/english/freepub/89-592-XIE/free.htm

This report presents a series of tables from the first release of data from the 2001 Aboriginal Peoples Survey (APS). Data in these tables are for the Aboriginal identity non-reserve population. Topics include self-rated health status, commonly reported chronic conditions, residential school attendance and the importance of keeping, learning or relearning an Aboriginal language.

Initial release - Supporting tables 2

#### http://www.statcan.ca/english/freepub/89-595-XIE/free.htm

This report presents a series of tables from the first release of data from the 2001 Aboriginal Peoples Survey (APS). Data in these tables are for the Aboriginal identity non-reserve population. Topics include reasons for not completing post-secondary school or elementary/ high school.

Off-Reserve Aboriginal Internet Users, Canadian Social Trends, Winter 2004
 http://www.statcan.ca:8096/bsolc/english/bsolc?catno=11-008-X20040037732

This article draws a basic profile of Internet use among Canadians of Aboriginal ancestry living off-reserve, using the 2001 Aboriginal Peoples Survey. Then, with the 2000 General Social Survey on technology use, it asks whether a second digital divide exists between these users.

#### Products to be released in Winter 2006

- Aboriginal Peoples Survey (APS), 2001: Public use microdata file (children off reserve)
   This file contains information from the "children and youth" (0–14 years)
   component of the 2001 Aboriginal Peoples Survey.
- Aboriginal Peoples Survey 2001 Provincial and Territorial Reports: Off reserve Aboriginal Population

A series of brief reports for each of the provinces and territories (Atlantic provinces are grouped) presents demographic, social and economic characteristics of the off-reserve Aboriginal populations. A report is also available for the Inuit population of the Canadian Arctic. Findings are based upon 2001 APS and 2001 Census data.

Community profiles in Beyond 20/20 format

The Internet community profiles (see above) are made available for use with the Beyond 20/20 Browser, a multidimensional data software manager.

- The North American Indian Population On Reserve: Socio-Economic Characteristics

  The analysis examines changes over time (1981-2001), and includes changes in
  demographics, education, labour force activity, household income, and housing. Data
  from the 1981, 1991 and 2001 Censuses and the 2001 Aboriginal Peoples Survey are
  used.
- Harvesting and Community Well-Being among Inuit in the North

This article provides basic information from two sections of a supplement to the Aboriginal Peoples Survey administered in the Canadian Arctic. Some findings on the state of harvesting (hunting, fishing and gathering) among Inuit across the Arctic are provided as are indicators of community wellness. In addition to data for all northern Inuit, figures are also shown for each of the 4 main Inuit regions (Nunatsiavut or Labrador, Nunavut, Nunavik in northern Quebec, and the Inuvialuit region in the Northwest Territories).

Users may also wish to apply for access to the APS analytical files, which are microdata files considerably more detailed than the APS PUMF. The APS analytical files include all content from the survey (raw data and derived variables), including detailed geographic identifiers and some 2001 Census information for APS respondents. Access to these files is available only

from within Statistics Canada's Research Data Centres (RDCs), which are located at selected universities across Canada (for more information, please refer to the webpage <a href="http://www.statcan.ca/english/rdc/index.htm">http://www.statcan.ca/english/rdc/index.htm</a>). Access to the APS analytical files is granted through application to Social Sciences and Humanities Research Council using the application located at: <a href="http://www.sshrc.ca/web/apply/program\_descriptions/ciss\_reseach\_data\_e.asp">http://www.sshrc.ca/web/apply/program\_descriptions/ciss\_reseach\_data\_e.asp</a>.

Custom tabulations of APS data are available from Statistics Canada at a price that reflects the resources required to produce them. To purchase custom tabulations or for additional information on APS products, please contact:

## Appendix A

Aboriginal Peoples Survey (APS), 2001

Public use microdata file (adults off reserve)

Rules for calculating approximate variance

#### Appendix A

#### Rules for calculating approximate variance

The variability or variance of an estimate is a good indication of the estimate's quality. An estimate with too high a variance is considered unreliable. To quantify what is considered too high, the APS uses the coefficient of variation (CV), which is a relative measure of variability. The use of the CV rather than that of the variance is very useful in comparing the precision of sample estimates where their sizes or scales are different.

The rules that follow should enable users to calculate approximate coefficients of variation for estimating the proportion or the percentage of observed population units that possess particular characteristics, as well as ratios and differences between estimates by using the Excel file *FindCV APS (PUMF).xIs*.

It should be noted that all coefficients of variation that appear in this table are approximate, and therefore they may not be considered official values.

#### **Quality rules**

The same quality rules that were applied for the different APS data releases have been applied here. Accordingly, when a cell contains 10 or fewer (unweighted) individuals, the contents of the cell is deleted. Hence, zeroes replace the results in all of the table's "results" columns. Moreover, there are guidelines for disseminating estimates and we have also adopted a colour code for estimated CVs.

Table 1. Guidelines for disseminating estimates

Category	Coefficient of variation (%)	Colour	Guidelines		
Acceptable	0.0 – 16.5	White	This estimate can be used with no restriction.		
Marginal	16.6 – 33.3	Yellow	The estimate must be used carefully as it is associated with a high level of error. Every time this level occurs, the symbol "E" should be attached to the estimate in question.		
Unacceptable	Over 33.3	Red	If the value obtained for the CV is over 33.3, this information should not be disseminated. However, if the user chooses to do so, the estimate should be disseminated with the following warning: "We inform the user that <specify data="" the=""> does not meet Statistics Canada's quality standards. The conclusions drawn from this data are not reliable". Also, the symbol "F" should be attached to the estimate in question.</specify>		

The CV table's different columns appear in tables 2 and 3.

Table 2. Parameters to be specified in defining estimation domains

Parameters to be specified	Possible	Marginal			
Geographic region	CMA, Arctic, Other rural, Other urban  (Canada				
Aboriginal group	Identity	Non-Inuit (Arctic)  NAI <sup>3</sup> Métis  Inuit  NAI & Métis  Other multiple	TOTAL – Identity	TOTAL	
	Ancestry (Origin)	Non-Inuit (Arctic)  NAI <sup>3</sup> Métis  Inuit  NAI & Métis  Other multiple	TOTAL – Origin		
Age group	15-19, 20-24, 25-3 and	TOTAL (15 years and older)			
Sex	Male or	TOTAL (Male and female)			
Target P	Proportion targeted during simulation (1%, 5%, 10%, 15%, 20%, 25%, 30%, 35%, 40% or 50%). Only used as benchmark. Use Simulated P for analyses.				

Table 3. Estimates provided by the table

Results	Meaning				
Simulated P	Actual proportion obtained during simulation. Should be fairly close to Target P. Use this proportion, rather than Target P, in analyses.				
n	Number of individuals in the sample (unweighted)				
N	Number of individuals in the population (weighted)				
CV	Approximate estimated coefficient of variation using the bootstrap				
INF	Lower limit of the 95% confidence interval for the simulated proportion				
SUP	Upper limit of the 95% confidence interval for the simulated proportion				

<sup>&</sup>lt;sup>3</sup> North American Indian

It is important to note that certain simulated proportions are relatively far from the target proportion. In most cases, this situation is due to the small number of observations in the cell in question. For that reason, it is quite likely that all simulated proportions for this particular domain are far from the target value and their corresponding CVs appear in red.

#### Use of the CV

This section provides explanations and examples to issues that come up most commonly during data analysis. These are:

- 1. How can the CV of an estimate (proportion or percentage) be obtained?
- 2. Is the observed difference between two estimates statistically significant?
- 3. How can a CV be obtained if the estimate is greater than 50%?
- 4. How can a CV be obtained if only one subgroup of the population responds to a certain question?

#### 1. How can the CV of an estimate (proportion or percentage) be obtained?

a) Open the *FindCV APS (PUMF).xIs* file. The following screen appears:

A	В	С	D	E	F	G	Н	- 1	J	K
Geographic region 💂	Aboriginal group	Age group	Sex 💂	Target P	Simulated P	n	N	CV	INF	SUP
5. TOTAL	15. TOTAL	TOTAL	TOTAL	1%	1.0155	29592	785778	11.566	0.785	1.246
5. TOTAL	15. TOTAL	TOTAL	TOTAL	5%	5.0492	29592	785778	4.828	4.5705	5.5279
5. TOTAL	15. TOTAL	TOTAL	TOTAL	10%	10.1118	29592	785778	3.326	9.4524	10.771
5. TOTAL	15. TOTAL	TOTAL	TOTAL	15%	14.9883	29592	785778	2.674	14.2028	15.774
5. TOTAL	15. TOTAL	TOTAL	TOTAL	20%	19.9696	29592	785778	2.245	19.0909	20.848
5. TOTAL	15. TOTAL	TOTAL	TOTAL	25%	24.9272	29592	785778	1.951	23.9743	25.88
5. TOTAL	15. TOTAL	TOTAL	TOTAL	30%	29.9832	29592	785778	1.716	28.9742	30.992
5. TOTAL	15. TOTAL	TOTAL	TOTAL	35%	35.1084	29592	785778	1.519	34.0634	36.153
5. TOTAL	15. TOTAL	TOTAL	TOTAL	40%	40.0168	29592	785778	1.382	38.9324	41.101
5. TOTAL	15. TOTAL	TOTAL	TOTAL	50%	50.0979	29592	785778	1.119	48.9988	51.197

- b) Click on the drop-down menu button in the "Geographic region" column and select the region for which you want estimates. This action filters your data so that only those lines of the table that contain estimates for the specified geographic region are considered. If you are not seeking information on a particular region, select "(All)," to list all geographic regions or select "5. TOTAL" to retain only overall estimates for all of Canada.
- c) Perform the same actions as above with the "Aboriginal group", "Age group" and "Sex" columns.
- d) Use the "Target P" button to select the proportion you want. If you want to obtain a CV for a proportion that does not appear on the list, for example 23%, select "(All)" from the menu to retain all proportions. In this manner, CVs that correspond to proportions of 20% and 25% for the same domain will be displayed. We know that the desired CV (for 23%) is situated within these two limits.
- e) Results are presented in the last six columns of the table (see Table 3 above).

# Example 1: Suppose we want to estimate the percentage of North American Indian identity men aged 55 and over with "Excellent" or "Very good" self-rated health.

Using the weight WGT\_PUMF to run a frequency table, we obtain the following results for self-rated health of men aged 55 and over who have North American Indian (single) identity:

Excellent	Very good	Good	Fair	Poor	Missing	Not stated or invalid
16.96%	21.82%	26.14%	21.18%	13.30%	0.61%	0.00%

According to this table, 38.78% of North American Indian men aged 55 and over are in "Excellent" or "Very good" health. To find the approximate CV for this estimate:

- 1) Open the "FindCV APS (PUMF).xls" file.
- 2) Select "5. TOTAL" in the "Geographic region" column.
- 3) Select "02. NAI Identity" in the "Aboriginal group" column.
- 4) Select "55+" in the "Age group" column.
- 5) Select "Male" in the "Sex" column.
- 6) In the "Target P" column, look to find the percentage closest to 38.78% in this case 40%.
- 7) In the column labelled "CV", you can find the corresponding CV for the estimate (9.928%). The INF and SUP columns indicate that the confidence interval for the estimate is: 32.0741% to 47.504% (with 95% confidence or 19 times out of 20). Since the CV for the estimate is lower than 16.6%, it can be used without problems.

We can also see that the number of cases in the chosen domain (n) is 662 and the estimated population of North American Indian men aged 55 and over (N) is 16,281.

**Note to users:** It is important to remember that the simulated percentage (Simulated P), the coefficient of variation (CV) and confidence limits (INF and SUP) are approximate values only, based on the "Target P" closest to your calculated estimate. In order to obtain more accurate values for the CV and confidence limits, you may want to recalculate them by interpolation.<sup>4</sup>

#### 2. Is the observed difference between two estimates statistically significant?

As appears in the table, the lower (INF) and upper (SUP) limits of the 95% confidence interval correspond with each simulated proportion. Once these limits have been identified, the method for determining whether the difference between two estimates is statistically significant is relatively simple. If the two intervals overlap, we cannot confirm whether the two estimates are different (or, in more technical terms, with a confidence level of 95%, we *cannot* dismiss the null hypothesis that there is no statistical difference between the two estimates). However, if the two

<sup>&</sup>lt;sup>4</sup> In the first example, our calculated percentage was 38.78% so we selected the closest Target P of 40%. However, if we were to also retrieve the values for 35%, we could then have the following:

Simulated P	CV	INF	SUP	
34.8597	10.976	27.3851	42.334	
39.7891	9.928	32.0741	47.504	
	34.8597	34.8597 10.976	34.8597 10.976 27.3851	

By linearly interpolating based on where the calculated percentage of 38.78% falls between 35% and 40%, we would then get:

Target P Simulated P CV INF SUP

38.78% 38.5863 10.184 30.9300

The new CV of 10.184, for example, is obtained by the calculation:

10.976 + (9.928-10.976)\*(38.78-35)/(40-35)

46.243

intervals do not overlap, it is possible to confirm that the two percentages are different (in more technical terms, with a confidence level of 95%, we *can* dismiss the null hypothesis that there is no statistical difference between the two estimates).

Example 2: We want to know if there is a significant difference between the percentage of North American Indian identity women aged 55 and over with "Excellent" or "Very good" self-rated health compared to the percentage of North American Indian identity men aged 55 and over with "Excellent" or "Very good" self-rated health.

	Excellent	Very good	Good	Fair	Poor	Missing	Not stated or invalid
Men	16.96%	21.82%	26.14%	21.18%	13.30%	0.61%	0.00%
Women	7.83%	17.36%	29.09%	28.75%	16.14%	0.65%	0.18%

According to this table, 25.19% of North American Indian women 55 and over rate themselves as being in "Excellent" or "Very good" health. To find the approximate CV and confidence interval for this estimate, use the same steps as in example 1, but this time choose "Female" in the "Sex" column and 25% (number closest to 25.19%) in the "Target P" column. The CV here is 10.352 and the 95% confidence interval goes from 20.1559 to 30.417.

In order to assess if the difference between the two estimates is statistically different, the 2 confidence intervals have to be compared:

Men: 32.0741% to 47.504% Women: 20.1559% to 30.417%

Since the two intervals do not overlap, we can say that the proportion of North American Indian identity men aged 55 and over with "Excellent" or "Very good" self-rated health is significantly higher than the proportion of North American Indian identity women aged 55 and over with "Excellent" or "Very good" self-rated health.

#### 3. How can a CV be obtained if the estimate is greater than 50%?

First, a brief reminder on the formula for calculating a coefficient of variation:

$$CV = \frac{Standard\ error}{Estimate} \times 100$$

The table gives us the CV and the estimate (the proportion or Simulated P). The standard error was estimated using the bootstrap, and is the square root of the variance.

Let us assume that we are interested in a proportion greater than 50% in a particular domain. No CVs have been calculated for proportions greater than 50% because the desired CV can easily be calculated using the complementary proportion as follows:

Suppose we want the CV of proportion B, which is greater than 50%. We will use the CV of the complementary proportion A, where A=100-B. From the formula for the CV, we know that

$$CV_A = \frac{Standard\ error_A}{Estimate_A} \times 100\ .$$

Since the CV and the estimate can be found in the CV table, we will use them to calculate the standard error of A:

$$Standard\ error_A = \frac{CV_A \times Estimate_A}{100}$$
.

Since the **standard error for A is the same as it is for its complement B**, we can find the CV of B simply by using the original formula:

$$CV_B = \frac{Standard\ error_A}{Estimate_B} \times 100$$
.

For this to work, the proportions A and B must be **in the same domain**.

# Example 3: Suppose we want to find the percentage of the Aboriginal identity population whose first official language is English.

Running a frequency table on the first official language spoken, we obtain the following:

English	French	English & French	Neither	Missing
87.00%	11.52%	0.30%	0.61%	0.57%

According to this table, 87.00% of the Aboriginal identity population reported English as their first official language. To find the approximate CV for this estimate:

- 1) Open the "FindCV APS (PUMF).xls" file.
- 2) Select "5. TOTAL" in the "Geographic region" column.
- 3) Select "07. TOTAL Identity" in the "Aboriginal group" column.
- 4) Select "TOTAL" in the "Age group" and "Sex" columns.
- 5) In the "Target P" column, look to find the closest percentage to 13.00% (100.00-87.00) in this case 15%.
- 6) The CV in this case is 2.775%. Since  $CV = (Standard\ error\ /\ estimate)*100$ , the standard error is found by multiplying the CV by the true proportion (Simulated P): SE = 2.775%\*15.0105=0.4165.
- 7) Divide the standard error by the value of the observed percentage to get the CV: CV = 0.4165 / 87.00% = 0.4787%.

Since the CV for the estimate is lower than 16.6%, it can be used without problems.

# 4. How can a CV be obtained if only one subgroup of the population responds to a question?

This scenario differs from its predecessors in the way that respondents have been previously distinguished from the rest of the population on the basis of a particular characteristic.

If the subgroup in question corresponds to a domain that falls among those listed in the Excel application, the approach is the same as finding the CV of a simple proportion or percentage.

However, if the sub-group does not correspond to a domain listed in the Excel application, the proportion of those respondents out of all respondents is the one to use, not the proportion out of the sub-group. The percentage must be recalculated out of the entire population if the observations coded as 'missing' or 'not stated or invalid' are ignored. If these categories are taken into consideration, then the CV application can be used as before.

We must absolutely distinguish between these two different estimation domains if we want to obtain the CV for a subgroup of the population. Ultimately, we must ensure that the denominator of our proportion clearly corresponds with the N value appearing in the table.

## Example 4: Suppose we want to determine the proportion of Métis (single) identity adults who have obtained a high school diploma.

There are two ways one can get the answer.

<u>Method 1:</u> If the frequencies take into account the 'missing' and 'not stated or invalid' answers, then the CV in the table can be looked up as before.

Yes	No	Missing	Not stated
168	INO	iviissirig	or invalid
48.42%	16.34%	34.70%	0.54%

Using the CV table, we can find that the CV for the proportion of Métis identity adults with a high school diploma is 1.7%.

<u>Method 2:</u> If the frequencies do not take into account the 'missing' and 'not stated or invalid' answers, then the proportion has to be recalculated as a function of the entire population.

A02GRAD	Frequency	Percent	Cumulative Frequency	Cumul ati ve Percent
01	104815. 9	74. 77	104815. 9	74. 77
02	35364	25. 23	140179. 9	100. 00

If a user were to use this proportion (74.77%) to estimate a CV, an incorrect CV of 0.977% would be obtained using the method from example 3:

CV = standard error of (100-74.77)% / 74.77 \* 100

= (CV of 25.23% \* Simulated P of 25% / 100) / 74.77 \* 100

= (2.94 \* 24.8562 / 100) / 74.77 \* 100% = 0.977

Here, 104,816 Métis identity adults report having their high school diploma, which as a proportion of the population is 104,816/216,462 = 48.42%. Using this estimate, we can use the CV application and obtain the same result as for method 1.

				29,592	785,777

Coverage: All respondents 15 years of age and over.

Note:

A CMA (Census Metropolitan Area) is an area consisting of one or more adjacent municipalities situated around a major urban core with a population of at least 100,000. Arctic refers to the area covered by the four Inuit regions as defined by the Inuit Tapiriit Kanatami, i.e. the Northern coastal region of Labrador, the Nunavik region of northern Quebec, the Territory of Nunavut and the Inuvialuit region of the Northwest Territories. The GEO variable further classifies the area outside of CMA and Arctic according to Statistics Canada's definition of urban and rural areas, as follows: an urban area is an area with a population of at least 1,000 and no fewer than 400 persons per square kilometre. Territory outside urban areas is classified as rural.

3	Three- (or more) maintainer household	969	23,281
		=====	=======
		29,592	785,778

Coverage: All respondents 15 years of age and over.

Note:

<sup>(1)</sup> Data for this variable were obtained from the respondent's answers in the 2001 Census.

<sup>(2)</sup> Household maintainer refers to the person or persons in the household who pay the rent, or the mortgage, or the taxes, or the electricity, etc., for the dwelling. If no person in the household is responsible for such payments, Person 1 is considered to be the only household maintainer. For additional information, please refer to the 2001 Census Dictionary, Catalogue Number 92-378-XIE or 92-378-XPE.

		-		=====	=======
				29.592	785,778

Coverage: All respondents 15 years of age and over.

Note:

- (1) Data for this variable were obtained from the respondent's answers in the 2001 Census.
- (2) Classification of persons according to whether or not they are members of a census family and the status they have in the census family (a census family is composed of a married couple or two persons living common-law, with or without children, or of a lone parent living with at least one child in the same dwelling). A person can be a spouse, a common-law partner, a lone parent, a child or a non-family person.

Family persons refer to household members who belong to a census family. They, in turn, are further classified as follows:

- Spouses refer to persons of opposite sex who are legally married to each other and living in the same dwelling.
- Common-law partners are two persons of opposite sex or of the same sex who are not legally married to each other, but live together as a couple in the same dwelling.
- Lone parent refers to a mother or a father, with no spouse or common-law partner present, living in a dwelling with one or more children.
- Children refer to blood, step- or adopted sons and daughters (regardless of age or marital status) who are living in the same dwelling as their parent(s), as well as grandchildren in households where there are no parents present. Sons and daughters who are living with their spouse or common-law partner, or with one or more of their own children, are not considered to be members of the census family of their parent(s), even if they are living in the same dwelling. In addition, those sons and daughters who do not live in the same dwelling as their parent(s) are not considered members of the census family of their parent(s). The category of children can be further distinguished as follows:
- . Never-married sons and/or daughters in a census family, as used in censuses prior to 2001.
- . Other sons and/or daughters in a census family who would not have been included in the census family of their parents according to the previous concept.
- . Grandchildren living in the same household as their grandparent(s), with no parents present.

Non-family persons refer to household members who do not belong to a census family. They may be related to Person 1 (e.g., Person 1's sister, brother-in-law, cousin, grandparent), or unrelated to Person 1 (e.g., lodger, room-mate, employee). A person living alone is always a non-family person.

(3) For additional information, please refer to the 2001 Census Dictionary, Catalogue Number 92-378-XIE or 92-378-XPE.

		=====	=======
		29,592	785,777

Coverage: Respondents who answered 'Eleven', 'Twelve', 'Thirteen', 'Don't know' or 'Refused' to question A1.

Note:

(1) High school graduation varies from province to province and can mean anything from grade 11 to grade 13. As well, it may vary according to the year the respondent graduated (for example, 20 years ago, high school graduation in Quebec was Grade 12). 'Graduate' means the respondent successfully completed secondary school.

(2) Graduation through High School Equivalency program (GED) is not to be recorded under this question, but the next one.

<sup>(1)</sup> Completed years of education is the total number of years of elementary or high school successfully passed.

<sup>(2)</sup> A General Educational Development (GED) diploma is considered as equivalent to Grade 12. The GED testing program is for adults who have not finished high school. Successful completion of the GED demonstrates that they have acquired the knowledge and skills associated with, and comparable to, high school completion. A GED diploma is recognised by many educational institutions and employers as the equivalent of a grade 12 high school diploma.

		29,592	785,778

Coverage: Respondents who answered 'Yes' to question C1 or 'From January 1st 2000, to present' to question C9. Note:

<sup>(1)</sup> Derived from questions 10 and 23.

<sup>(2)</sup> Respondents who held more than one job last week were asked to answer for the job they worked the most hours.

<sup>(3)</sup> The kind of business, industry or service describes the industry that the respondent was employed in but not his or her occupation. For example, the respondent's occupation may be a production line supervisor for a company that is in the kitchen cabinet manufacturing industry. The industry is kitchen cabinet manufacturing, while the occupation is production line supervisor. (4) The North American Industry Classification System was devised by Canada, Mexico and the United States to allow industry comparability among the three nations. It groups economic activity into 20 sectors, 99 subsectors, 321 industry groups, 734 industries and a number of national industries (921 in the case of Canada). For more information refer to the following publication: 12-501-XPE - North American Industry Classification System - NAICS Canada.

				29,592	785,780

<sup>(1)</sup> Data for this variable were obtained from the respondent's answers in the 2001 Census.

<sup>(2)</sup> Refers to the kind of work persons were doing during the reference week, as determined by their kind of work and the description of the main activities in their job. If the person did not have a job during the week (Sunday to Saturday) prior to enumeration (May 15, 2001), the data relate to the job of longest duration since January 1, 2000. Persons with two or more jobs were to report the information for the job at which they worked the most hours.

were to report the information for the job at which they worked the most hours.

(3) The 2001 occupation data are classified according to the 2001 National Occupational Classification for Statistics (NOC-S 2001). This classification is composed of four levels of aggregation. There are 10 broad occupational categories containing 47 major groups that are further subdivided into 140 minor groups. At the most detailed level, there are 520 occupation unit groups. Occupation unit groups are formed on the basis of the education, training, or skill level required to enter the job, as well as the kind of work performed, as determined by the tasks, duties and responsibilities of the occupation.

		=====	=======
		29.592	785.779

Coverage: All respondents 15 years of age and over.

<sup>(1)</sup> Derived from questions E22 and E23.

<sup>(2)</sup> In 2004, Statistics Canada adopted the Health Canada system for adult body weight classification, based on the Body Mass Index (BMI). BMI is a method of determining health risk as it relates to body weight and height. The BMI is calculated by dividing the weight in kilograms by the square of the height in metres.

<sup>(3)</sup> The BMI is generally regarded to be not applicable to the following groups of people (who will consequently have a missing value for BMI\_ADLT): pregnant women, persons with a height of more than 2.108 metres (6 feet 11 inches) and persons with a height of less than 0.914 metres (3 feet). In addition, Health Canada recommends that BMI not be defined for lactating women; however, since APS did not ask such a question, this population cannot be identified. The adult classification does not apply to persons under 18; however, to reduce the risk of disclosure on the PUMF, ALL persons under 20 have been given a missing value for BMI\_ADLT.

<sup>(4)</sup> Values of Not stated or Invalid', 'Don't know' or 'Refused' for height or weight result in a 'Not stated or Invalid' BMI\_ADLT. (5) Health Canada notes that "For persons 65 years and older the 'normal' range may begin slightly above BMI 18.5 and extend into the 'overweight' range." It also cautions that the classification may have some limitations for the following groups: "young adults who have not attained full growth, adults who have a naturally very lean body build, adults who have a very muscular body build, and certain ethnic or racial groups." (Health Canada. Canadian Guidelines for Body Weight Classification in Adults. 2003. Ottawa, Cat. no. H49-179/2003E, p. 10, 13).

		=====	=======
		29,592	785,778

Coverage: Respondents 15 years of age and over living in Inuit communities.

Note:

The MHI5 variable is an indication of the presence of symptoms related to 'psychological distress'. The Mental Health Inventory (MHI) was developed from the Medical Outcomes Study Short Form (SF-36), a generic health measure. The full-length MHI contains 38 items; the MHI-5 is a shorter form of the MHI, and includes the 5 items most highly correlated with the full-length MHI. The MHI5 variable is derived from the responses to J1ANERV, J01BCALM, J01CBLUE, J01DHAPY and J01DOWN, each of which is reported on a 6-point scale (Never, Almost never, Sometimes, Fairly often, Very often, Always). The variable is derived by assigning a raw score of between 1 and 6 to each item in Question J1, with a lower score linked to a higher risk of distress. For example, for the item, 'Have you felt calm and peaceful?', a response of 'Never' would merit a raw score of 1 while, at the other extreme, 'Always' would receive a 6. On the other hand, for a 'negative' item such as 'Have you been a very nervous person?', 'Never' would result in a 6, while 'Always' would be assigned a 1. The five resulting numbers would then be added, resulting in a total raw score between 5 and 30. This total would then be put on a linear scale from 0 to 100 by applying the formula: MHI5 = ((total raw score - 5) / 25) \* 100. Note that a value of 'Not stated or Invalid' for MHI5 can be interpreted as being associated with an increased degree of psychological distress. There is no universally accepted cutpoint for classifying the portion of the population having, or at risk of, anxiety or depression. The following sources may be helpful in interpreting this measure:

# Appendix D

## Aboriginal Peoples Survey (APS), 2001

## Adult core questionnaire

Collected under the authority of the *Statistics Act*. Statutes of Canada, 1985, Chapter S19.

#### INTRODUCTION

Statistics Canada, in partnership with Aboriginal organizations, is conducting the Aboriginal Peoples Survey to collect data on lifestyles and living conditions of Aboriginal people in Canada. This information will help Aboriginal organizations and communities along with various levels of government understand the needs of Aboriginal people in Canada. To reduce the number of questions on this survey, the Census information collected last May will be added to the data from this interview. All information will be kept confidential and used for statistical purposes only. While your participation is voluntary, your assistance is very important to ensure that the survey results depict an accurate picture.

### ADULT QUESTIONNAIRE

### Λ

### **Section A - EDUCATION**

Now I would like to ask you some questions about your formal education.

1. Excluding kindergarten, how many grades of elementary and high school have you successfully completed? (Interviewer: Include High School Equivalency program.)

- 2. Did you graduate from high school? Please do not include graduation through a High School Equivalency program (GED).
  - on  $\bigcirc$  Yes  $\rightarrow$  Go to Question 15
  - 02 ( ) No
- 3. Have you successfully completed a High School Equivalency program (GED)?
  - 01  $\bigcirc$  Yes  $\rightarrow$  Go to Question 14 02  $\bigcirc$  No
- 4. Are you currently attending elementary or high school or a High School Equivalency program?
  - 01 Yes
  - $02 \bigcirc No \rightarrow Go \ to \ Question \ 14$
- 5. Are you attending full time or part time?
  - 01 O Full time
  - 02 Part time, day or evening
- 6. Is the program you are currently taking a High School Equivalency program?
  - o1 Yes → Go to Question 14
  - 02 O No
- 7. Are any of your teachers or teachers' aides Aboriginal?
  - 01 Yes
  - 02 ( No
  - 03 O Don't know
- 8. Do any of your teachers or teachers' aides teach in an Aboriginal language?
  - 01 Yes
  - 02 O No
  - 03 O Don't know
- 9. Are you being taught an Aboriginal language at elementary or high school?
  - 01 Yes
  - 02 ( No
  - 03 O Don't know

10.	Are you being taught about Aboriginal people at elementary or high school?
	01 () Yes
	$egin{pmatrix}  ext{02} & igcup &  ext{No} \  ext{03} & igcup &  ext{Don't know} \end{pmatrix}  ightarrow  ext{Go to Question 12}$
11.	Do you feel that what you are being taught about Aboriginal people is usually accurate, sometimes accurate, seldom accurate or never accurate?
	01 Usually accurate
	02 O Sometimes accurate
	03 O Seldom accurate
	04 Never accurate
	05 O Don't know
12.	Where were the elementary schools you attended located? Were they all within the community where you lived, outside the community, or some within and some outside?
	01 All within community
	02 All outside community
	03 O Some within community and some outside community
13.	Where were the high schools you attended located? Were they all within the community where you lived, outside the community, or some within and some outside?
	01 O All within community
	02 All outside community
	03 O Some within community and some outside community
	04 O Did not go to high school
	Go to Question 35
14.	Why did you not continue elementary or high school? (Interviewer: <u>Do not read list</u> . Mark all that apply.)
	01 () Wanted to work
	02 Had to work
	03 O Bored with school
	04 O School courses too hard/bad results
	05 Pregnancy/taking care of children
	06 O Problems at home
	07 () To help at home
	08 No school available/accessible
	09 O Don't know
	10 O Refused
	11 Other reasons
	- Specify 12
15.	Were any of your teachers or teachers' aides in elementary or high school (including High School Equivalency program) Aboriginal?
	01 Yes
	02 O No
	03 O Don't know
16.	Did any of your teachers or teachers' aides teach in an Aboriginal language?
	01 () Yes
	02 () No
	03 O Don't know
17.	Were you taught an Aboriginal language while you were attending elementary or high school (including High School Equivalency program)?
	01 Yes
	02 O No
	03 Opn't know

Did you receive any type of financial assistance towards your postsecondary schooling? 01 Yes  $\stackrel{-}{\bigcirc}$  On waiting list  $\left. 
ight\} 
ightarrow Go$  to Question 35 29. What type of financial assistance did you receive? (Interviewer: Do not read list. Mark all that apply.) 01 NAC or Band funding 02 Grant, bursary or scholarship 03 Student loan 04 Personal bank loan 05 Other - Specify .....06 Go to Question 35

Number 06

30a. In what year did you last attend a post-secondary school? Year 30b. Why did you not finish your post-secondary schooling? (Interviewer: Do not read list. Mark all that apply.) 01 Family responsibilities 02 Financial reasons 03 Lost interest / lack of motivation 04 O Too old or too late now 05 Courses too hard / bad results 06 Too difficult to be away from home 07 O Don't know 08 Other reasons Did you take any of your post-secondary courses by correspondence or through some other form of distance education? By "distance education" we mean education received via mail or electronic media such as television, CD-Rom or the Internet. 01 Yes 02 ( No 32. Did you apply for financial assistance to carry out your post-secondary schooling? 01 Yes  $02 \bigcirc No \rightarrow Go \ to \ Question \ 35$ 33. Did you receive any type of financial assistance towards your post-secondary schooling? 02 ( No → Go to Question 35 03 On waiting list 34. What type of financial assistance did you receive? (Interviewer: Do not read list. Mark all that apply.) 01 NAC or Band funding 02 Grant, bursary or scholarship 03 ( ) Student loan 04 Personal bank loan 05 Other - Specify .....06 These next two questions may be personal. I can skip them if you prefer not to answer. Were you ever a student at a federal residential school or industrial school? 01 Yes 02 ( ) No 03 Refused Were any of the following members of your family ever a student at a federal residential school or industrial school? Not Don't (Interviewer: Read categories) applicable Nο Refused Yes know 03 🔘 04 🔘 01 ( ) 02 🔘 06 ( ) 07 ( 08 ( ) 05 ( 10 ( 12 ( ) 11 ( ) 14 ( ) 16 ( ) • Father ..... 13 🔘 15 ( ) 18 ( ) 19 ( 20 ( 21 ( 23 ( 24 ( ) 26 ( ) 25 ( ) 28 ( ) 29 ( 30 🔘 31 () 34 ( ) 33 ( ) 35 🔘 36 (

### Section B – LANGUAGE I would like to ask you some questions about languages you use and your ability to speak, understand, read and write an Aboriginal language. By "Aboriginal language", I mean, for example Cree, Ojibway, Inuktitut, etc. 1. Do you understand or speak an Aboriginal language? 01 ( ) Yes 02 No → Go to Question 9 2. What Aboriginal language or languages do you understand or speak? 01 02 03 How would you rate your ability to understand your primary Aboriginal language? By "primary" we mean the language that you use most often or that you are most comfortable using. Would you say you can . . 01 Understand very well? 02 Understand relatively well? 03 O Understand with effort? 04 Understand a few words? How would you rate your ability to speak your primary Aboriginal language? Would you say you can . . . 01 Speak very well? 02 Speak relatively well? 03 O Speak with effort? 04 O Speak a few words? 5. How would you rate your ability to read in your primary Aboriginal language? Would you say you can . . . 01 Read very well? 02 Read relatively well? 03 Read with effort? 04 Read a few words? 05 Not read in your primary Aboriginal language? → Go to Question 7 06 Not applicable (it is not a written language)? 6. How would you rate your ability to write in your primary Aboriginal language? Would you say you can . . . 01 Write very well? 02 Write relatively well? 03 Write with effort? 04 Write a few words? 05 Not write in your primary Aboriginal language?

7. How much of the time do you <u>currently</u> use your primary Aboriginal language . . .

	All the time	Most of the time	Some of the time	Very seldom	Not at all	Not applicable
• In your household?	01 🔾	02 🔘	03 🔘	04 🔘	05 🔘	06 🔾
• At work?	07 🔘	08 🔘	09 🔘	10 🔾	11 🔾	12 🔾
• At school?	13 🔾	14 🔾	15 🔾	16 🔾	17 🔾	18 🔾
• At other places?	19 🔾	20 🔘	21 🔵	22 🔾	23 🔾	24 🔾

### Section C – LABOUR ACTIVITY

The following questions are about labour activities that you may have participated in. Some questions may not apply to you but remember that many different people across the country will be taking part in this survey. I will start with a few questions on paid work.

1.	Last week, did you work for pay or in self-employment?		
••			
	01 $\bigcirc$ Yes $\longrightarrow$ Go to Question 2 02 $\bigcirc$ No $\longrightarrow$ Go to Question 3		
	02 NO 7 GO TO QUESTION 5		
2.	Last week, how many hours (to the nearest hour) did you spend working for pay or	in self-emp	oyment?
	01 Hours → Go to Question 10		
3.	Last week, were you on temporary lay-off or absent from your job or business?		
	01 Yes		
	$02$ $\bigcirc$ No $\longrightarrow$ Go to Question 5		
4.	Were you: (Interviewer: Mark only one circle.)		
	On temporary lay-off from a job to which you expect to return?		
	02 On vacation, ill, on strike or locked out,		
	or absent for other reasons? → Go to Question 10		
5.	Last week, did you have definite arrangements to start a new job within the next for	ır weeks?	
	01 Yes		
	02 O No		
6a.	Did you look for paid work during the past four weeks? For example: did you contactentre, check with employers, place or answer newspaper ads?	ct an emplo	yment
	01 Yes		
	$02 \bigcirc No \rightarrow Go \ to \ Question \ 9$		
6b.	Did you look for full-time or part-time work? (Interviewer: Mark all that apply.)		
	01 () Full-time		
	02 Part-time		
7.	Could you have started a job last week had one been available?		
	o1 () Yes → Go to Question 9		
	02 O No		
8.	Were there any particular reasons why you could not start a job last week?		
		Yes	No
	You had a temporary illness or disability?	01 ()	02 (
	You had personal or family responsibilities?	03 ( )	04 ( )
	You were going to school?	05 🔘	06 🔾
	You already had a job?	07 🔵	08 🔘
	Other reasons?	09 🔘	10 🔘
	- Specify		
			_

Page 10

16. Are you currently working at more than one paid job? 01 ○ Yes → Including the job we just talked about, how many jobs do you have? Jobs 03 ( No 17. Other than the job(s) you currently have, have you worked at other paid jobs since January 1st 2000? on  $\bigcirc$  Yes  $\rightarrow$  How many? Jobs 02 03 ( No Interviewer: If both questions 16 and 17 are answered NO → Go to Question 34 The next few questions are about this additional paid job. If you had more than one additional job, please answer for the one that you worked the most hours. 18. What was the kind of business, industry or service at this other job? Please be specific. 01 19. What was your work or occupation? 20. In this work, what were your most important duties or activities? Please name up to three. 1) 1st activity 01 2) 2<sup>nd</sup> activity 02 3) 3<sup>rd</sup> activity 03 21. In this job or business, were you mainly: of Self-employed, with or without paid help (alone or in partnership)? 02 Working for pay (including wages, salary, tips or commissions)? 03 Working without pay in a family farm or business? 22. What are the reasons why you have had more than one job since January 1st, 2000? (Interviewer: Do not read list. Mark all that apply.) 01 Needed additional income 02 Personal or family reasons 03 School or training 04 End of temporary, term, contract or seasonal job 05 Other reason Interviewer: Go to Question 34

Now I would like to ask you some questions about the job you worked at for the most hours since January 1st, 2000. 23. What kind of business, industry or service was this? Please be specific. 01 24. What was your work or occupation? 25. In this work, what were your most important duties or activities? Please name up to three. 1) 1st activity 01 2) 2<sup>nd</sup> activity 02 3) 3<sup>rd</sup> activity 03 26. In this job or business, were you mainly: of Self-employed, with or without paid help (alone or in partnership)? 02 Working for pay (including wages, salary, tips or commissions)? 03 Working without pay in a family farm or business? 27. Including the job we just talked about, how many paid jobs have you had since January 1st, 2000? on  $\bigcirc$  One  $\rightarrow$  Go to Question 32 Total number of jobs The next few questions are about this paid additional job. If you had more than one additional job, please answer for the one that you worked the most hours. 28. What was the kind of business, industry or service at this other job? Please be specific. 29. What was your work or occupation? 01 30. In this work, what were your most important duties or activities? Please name up to three. 1) 1st activity 01 2) 2<sup>nd</sup> activity 02 3) 3<sup>rd</sup> activity 03 31. In this job or business, were you mainly: 01 Self-employed, with or without paid help (alone or in partnership)? 02 Working for pay (including wages, salary, tips or commissions)? 03 Working without pay in a family farm or business?

	What are the reasons that keep you from (Interviewer: Do <u>not</u> read list. Mark all that	_	,		, -		
	01 O Going to school						
	02 No full-time jobs available in th	e area wher	e I live				
	03 Health problems

# Aboriginal Peoples Survey (APS), 2001

**Core and Métis supplement** 

Collected under the authority of the *Statistics Act*. Statutes of Canada, 1985, Chapter S19.

### INTRODUCTION

Statistics Canada, in partnership with Aboriginal organizations, is conducting the Aboriginal Peoples Survey to collect data on lifestyles and living conditions of Aboriginal people in Canada. This information will help Aboriginal organizations and communities along with various levels of government understand the needs of Aboriginal people in Canada. To reduce the number of questions on this survey, the Census information collected last May will be added to the data from this interview. All information will be kept confidential and used for statistical purposes only. While your participation is voluntary, your assistance is very important to ensure that the survey results depict an accurate picture.

## B Section B – LANGUAGE

I would like to ask you some questions about languages you use and your ability to speak, understand, read and write an Aboriginal language. By "Aboriginal language", I mean, for example Cree, Ojibway, Inuktitut, etc.

1.	Do you understand or speak an Aboriginal language?
•	01 Yes
	$02 \bigcirc No \rightarrow Go \ to \ Question \ 9$
2.	What Aboriginal language or languages do you understand or speak?
	01
	02
	03
3.	How would you rate your ability to <u>understand</u> your primary Aboriginal language? By "primary" we mean the language that you use most often or that you are most comfortable using. Would you say you can
	01 O Understand very well?
	02 Understand relatively well?
	03 Understand with effort?
	04 Understand a few words?
4.	How would you rate your ability to <u>speak</u> your primary Aboriginal language? Would you say you can
	01 O Speak very well?
	02 Speak relatively well?
	03 O Speak with effort?
	04 O Speak a few words?
5.	How would you rate your ability to <u>read</u> in your primary Aboriginal language? Would you say you can
	01 Read very well?
	02 Read relatively well?
	03 Read with effort?
	04  Read a few words?
	05 Not read in your primary Aboriginal language?
	06 ○ Not applicable (it is not a written language)? → Go to Question 7
6.	How would you rate your ability to <u>write</u> in your primary Aboriginal language? Would you say you can
	01 Write very well?
	02 Write relatively well?
	03 Write with effort?
	04  Write a few words?
	05 Not write in your primary Aboriginal language?
7.	How much of the time do you <u>currently</u> use your primary Aboriginal language
	All the Most of the Some of Very Not Not time time the time seldom at all applicabl
	• In your household?
	• At work? 07
	• At school?
	• At other places?

## C Section C – LABOUR ACTIVITY

The following questions are about labour activities that you may have participated in. Some questions may not apply to you but remember that many different people across the country will be taking part in this survey. I will start with a few questions on paid work.

1.	Last week, did you work for pay or in self-employment?		
	on ○ Yes → Go to Question 2		
	$01 \bigcirc \text{ fes} \longrightarrow G0 \text{ to Question } 2$ $02 \bigcirc \text{No} \longrightarrow G0 \text{ to Question } 3$		
	02 O NO 7 GO TO GUESTION O		
2.	Last week, how many hours (to the nearest hour) did you spend working for pay or	in self-emp	loyment?
	01 Hours → Go to Question 10		
3.	Last week, were you on temporary lay-off or absent from your job or business?		
	01 Yes		
	$02$ $\bigcirc$ No $\longrightarrow$ Go to Question 5		
4.	Were you: (Interviewer: Mark only one circle.)		
	01 On temporary lay-off from a job to which you expect to return?		
	02 On vacation, ill, on strike or locked out,		
	or absent for other reasons? → Go to Question 10		
5.	Last week, did you have definite arrangements to start a new job within the next fou	ır weeks?	
	01 Yes		
	02 O No		
6a.	Did you look for paid work during the past four weeks? For example: did you contactentre, check with employers, place or answer newspaper ads?	ct an emplo	yment
	01 Yes		
	$02 \bigcirc No \rightarrow Go \ to \ Question \ 9$		
6b.	Did you look for full-time or part-time work? (Interviewer: Mark all that apply.)		
	01 () Full-time		
	02 Part-time		
7.	Could you have started a job last week had one been available?		
	o1 ○ Yes → Go to Question 9		
	02  No		
8.	Were there any particular reasons why you could not start a job last week?		
		Yes	No
	You had a temporary illness or disability?	01 ()	02 (
	You had personal or family responsibilities?	03 🔘	04 🔘
	You were going to school?	05 🔵	06 🔾
	You already had a job?	07 🔘	08 🔘
	Other reasons?	09 🔘	10 🔘
	- Specify		

16. Are you currently working at more than one paid job? 01 ○ Yes → Including the job we just talked about, how many jobs do you have? Jobs 03 ( No 17. Other than the job(s) you currently have, have you worked at other paid jobs since January 1st 2000? on  $\bigcirc$  Yes  $\rightarrow$  How many? Jobs 02 03 ( No Interviewer: If both questions 16 and 17 are answered NO → Go to Question 34 The next few questions are about this additional paid job. If you had more than one additional job, please answer for the one that you worked the most hours. 18. What was the kind of business, industry or service at this other job? Please be specific. 01 19. What was your work or occupation? 20. In this work, what were your most important duties or activities? Please name up to three. 1) 1st activity 01 2) 2<sup>nd</sup> activity 02 3) 3<sup>rd</sup> activity 03 21. In this job or business, were you mainly: of Self-employed, with or without paid help (alone or in partnership)? 02 Working for pay (including wages, salary, tips or commissions)? 03 Working without pay in a family farm or business? 22. What are the reasons why you have had more than one job since January 1st, 2000? (Interviewer: Do not read list. Mark all that apply.) 01 Needed additional income 02 Personal or family reasons 03 School or training 04 End of temporary, term, contract or seasonal job 05 Other reason Interviewer: Go to Question 34

Now I would like to ask you some questions about the job you worked at for the most hours since January 1st, 2000. 23. What kind of business, industry or service was this? Please be specific. 01 24. What was your work or occupation? 25. In this work, what were your most important duties or activities? Please name up to three. 1) 1st activity 01 2) 2<sup>nd</sup> activity 02 3) 3<sup>rd</sup> activity 03 26. In this job or business, were you mainly: of Self-employed, with or without paid help (alone or in partnership)? 02 Working for pay (including wages, salary, tips or commissions)? 03 Working without pay in a family farm or business? 27. Including the job we just talked about, how many paid jobs have you had since January 1st, 2000? on  $\bigcirc$  One  $\rightarrow$  Go to Question 32 Total number of jobs The next few questions are about this paid additional job. If you had more than one additional job, please answer for the one that you worked the most hours. 28. What was the kind of business, industry or service at this other job? Please be specific. 29. What was your work or occupation? 01 30. In this work, what were your most important duties or activities? Please name up to three. 1) 1st activity 01 2) 2<sup>nd</sup> activity 02 3) 3<sup>rd</sup> activity 03 31. In this job or business, were you mainly: 01 Self-employed, with or without paid help (alone or in partnership)? 02 Working for pay (including wages, salary, tips or commissions)? 03 Working without pay in a family farm or business?

(Interviewer: Do not read list. Mark all that apply.) 01 Oil furnace 02 Natural gas or propane furnace 03 Other furnace 04 ( ) Electric heat (baseboard, space heaters) 05 Wood stove 06 Cooking stove 07 ( ) Hot water radiators - Specify .....

O Do not have heat

11 O Don't know

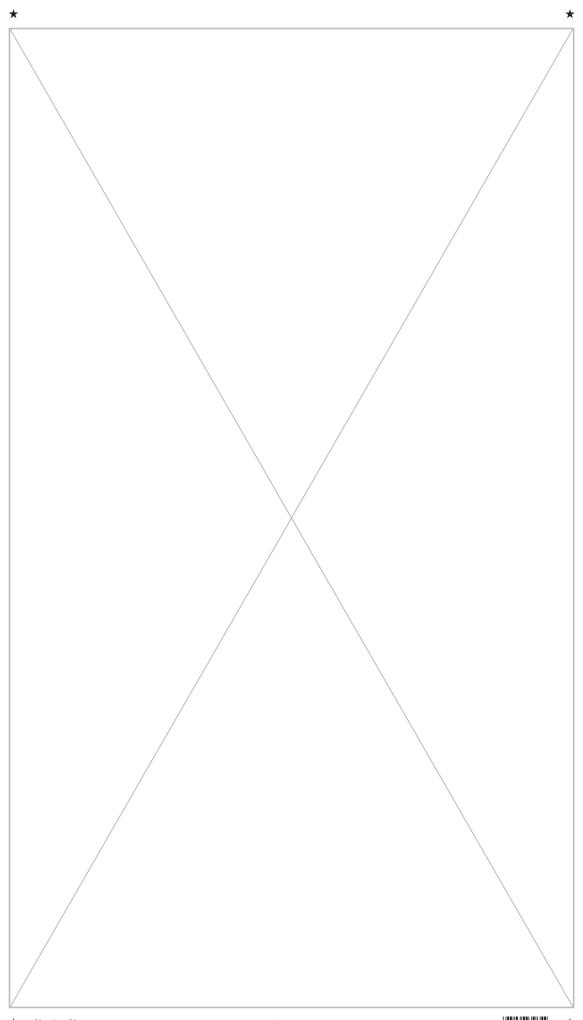

7. Do you consider the water available to your home safe for drinking? 01 Yes 02 O No 03 O Don't know 04 Not applicable Are there times of the year that your water is contaminated? 01 Yes 02 O No 03 O Don't know 04 Not applicable Is your home in need of major repairs (for example: a new roof, plumbing repairs, structural repairs)? 01 ( ) Yes 02 O No 03 O Don't know 10. Is your home rented or owned by you or another member of this household? on  $\bigcirc$  Rented by you or another member of this household  $\rightarrow$  Go to Question 11 (Interviewer: Check "Rented" even if no cash rent is paid; also include rent-to-own.) o2 Owned by you or another member of this household  $\rightarrow$  Go to Question 14 (Interviewer: Check "Owned" even if it is still being paid for.) 03  $\bigcirc$  Don't know  $\rightarrow$  End of PART 2 11. Is your home subsidized? 01  $\bigcirc$  Yes  $\rightarrow$  Go to Question 14 02 ( No 12. Are you on a waiting list for social housing? 02 No  $\rightarrow$  Go to Question 14 13. How long have you been waiting for social housing? Months OR Years 14. Is your home covered by insurance? on  $\bigcirc$  Yes  $\rightarrow$  End of PART 2 02 ( No 03  $\bigcirc$  Don't know  $\rightarrow$  End of PART 2 15. Why is your home not covered by insurance? Is it because... (Interviewer: Read list. Mark all that apply.) 01 Insurance is too expensive? 02 You can't find an insurance company that will insure you? 03 O Some other reason? 

## **END OF PART 2**

Interviewer: If the Métis supplement (Part 3 of this questionnaire) is not to be administered:

- Thank the respondent
- End the survey

: Otherwise continue with PART 3

## PART 3

This part of the survey applies to Métis people. It is being asked of all persons, 15 years of age and older, who identify as Métis and/or who have Métis ancestry.

This supplementary questionnaire was developed by Métis organizations in co-operation with Statistics Canada.

As with the other sections of this survey, Statistics Canada is required by law to keep your responses strictly confidential.

Topics include family background, language, culture and health.

### PART 3

## **MÉTIS SUPPLEMENT**

#### Section I - FAMILY BACKGROUND

This section deals with your family background.

1. To begin with, a few questions about the community of your birth. By community of your birth, we mean the community, village, town, city or settlement where your family lived at the time of your birth, not the location of the hospital where you were born. What is the name of the community where you were born?

Name of Community (Canada only)

101

Province or Territory (Canada only)

102

103 Outside of Canada

104 Don't know

2. Do you still reside in the community where you were born?

01 Yes

02 O No

2 a. How long has it been since you left the community where you were born?

01 Cless than 1 year ago

02 From 1 to 5 years ago

O3 From 6 to 9 years ago
O4 From 10 to 19 years ago

O4 O From 10 to 15 years at

05 O 20 or more years ago

2 b. Do you still have parents, family or relatives in the community where you were born?

01 Yes

02 O No

03 O Don't know

2 C. How often do you return to visit the community where you were born: often, rarely or never?

01 Often

02 Rarely

03 Never

2 d. Have you visited the community where you were born at any time in the last 12 months?

01 Yes

02 O No

8.	Is or was your father Aborigina	al by ancestry, that is, Indian/First Nation, Métis or Inuit?
	01  Yes 02  No 03  Don't know	8 a. By ancestry, is/was he (Interviewer: Mark all that apply.)  01  Indian/First Nation?  02  Métis?  03  Inuit?  04  Don't know

## Appendix F

## Aboriginal Peoples Survey (APS), 2001

**Core and Arctic supplement** 

Collected under the authority of the *Statistics Act*. Statutes of Canada, 1985, Chapter S19.

#### INTRODUCTION

Statistics Canada, in partnership with Aboriginal organizations, is conducting the Aboriginal Peoples Survey to collect data on lifestyles and living conditions of Aboriginal people in Canada. This information will help Aboriginal organizations and communities along with various levels of government understand the needs of Aboriginal people in Canada. To reduce the number of questions on this survey, the Census information collected last May will be added to the data from this interview. All information will be kept confidential and used for statistical purposes only. While your participation is voluntary, your assistance is very important to ensure that the survey results depict an accurate picture.

# B Section B – LANGUAGE

I would like to ask you some questions about languages you use and your ability to speak, understand, read and write an Aboriginal language. By "Aboriginal language", I mean, for example Cree, Ojibway, Inuktitut, etc.

1.	Do you understand or speak an Aboriginal language?
	01 ( Yes
	$02$ $\bigcirc$ No $\rightarrow$ Go to Question 9
2.	What Aboriginal language or languages do you understand or speak?
	mat <u>riboriginar</u> languago er languagos ao you unaciotana er opeakt
	01
	02
	03
3.	How would you rate your ability to <u>understand</u> your primary Aboriginal language? By "primary" we mean the language that you use most often or that you are most comfortable using. Would you say you can
	01 O Understand very well?
	02 O Understand relatively well?
	03 O Understand with effort?
	04 O Understand a few words?
4.	How would you rate your ability to <u>speak</u> your primary Aboriginal language? Would you say you can
	01 O Speak very well?
	02 O Speak relatively well?
	03 O Speak with effort?
	04 O Speak a few words?
5.	How would you rate your ability to <u>read</u> in your primary Aboriginal language? Would you say you can
	01 Read very well?
	02 Read relatively well?
	03 Read with effort?
	04
	05
	The applicable (it is not a written language).
6.	How would you rate your ability to <u>write</u> in your primary Aboriginal language? Would you say you can
	01 Write very well?
	02 O Write relatively well?
	03 Write with effort?
	04 O Write a few words?
	05 O Not write in your primary Aboriginal language?
_	
7.	How much of the time do you <u>currently</u> use your primary Aboriginal language
	All the Most of the Some of Very Not Not time time the time seldom at all applicable
	• In your household?
	• At work?
	• At school?
	• At other places?

#### Section C – LABOUR ACTIVITY

The following questions are about labour activities that you may have participated in. Some questions may not apply to you but remember that many different people across the country will be taking part in this survey. I will start with a few questions on paid work.

1.	Last week, did you work for pay or in self-employment?		
••			
	01 $\bigcirc$ Yes $\longrightarrow$ Go to Question 2 02 $\bigcirc$ No $\longrightarrow$ Go to Question 3		
	02 NO 7 GO TO QUESTION 5		
2.	Last week, how many hours (to the nearest hour) did you spend working for pay or	in self-emp	oyment?
	01 Hours → Go to Question 10		
3.	Last week, were you on temporary lay-off or absent from your job or business?		
	01 Yes		
	$02$ $\bigcirc$ No $\longrightarrow$ Go to Question 5		
4.	Were you: (Interviewer: Mark only one circle.)		
	01 On temporary lay-off from a job to which you expect to return?		
	02 On vacation, ill, on strike or locked out,		
	or absent for other reasons? → Go to Question 10		
5.	Last week, did you have definite arrangements to start a new job within the next for	ır weeks?	
	01 Yes		
	02  No		
6a.	Did you look for paid work during the past four weeks? For example: did you contactentre, check with employers, place or answer newspaper ads?	ct an emplo	yment
	01 Yes		
	$02 \bigcirc No \rightarrow Go \ to \ Question \ 9$		
6b.	Did you look for full-time or part-time work? (Interviewer: Mark all that apply.)		
	01 () Full-time		
	02 Part-time		
7.	Could you have started a job last week had one been available?		
	o1 () Yes → Go to Question 9		
	02  No		
8.	Were there any particular reasons why you could not start a job last week?		
		Yes	No
	You had a temporary illness or disability?	01 ()	02 (
	You had personal or family responsibilities?	03 ( )	04 ( )
	You were going to school?	05 🔾	06 🔾
	You already had a job?	07 🔵	08 🔘
	Other reasons?	09 🔘	10 🔾
	- Specify		

Page 10

16. Are you currently working at more than one paid job? 01 ○ Yes → Including the job we just talked about, how many jobs do you have? Jobs 03 ( No 17. Other than the job(s) you currently have, have you worked at other paid jobs since January 1st 2000? on  $\bigcirc$  Yes  $\rightarrow$  How many? Jobs 02 03 ( No Interviewer: If both questions 16 and 17 are answered NO → Go to Question 34 The next few questions are about this additional paid job. If you had more than one additional job, please answer for the one that you worked the most hours. 18. What was the kind of business, industry or service at this other job? Please be specific. 01 19. What was your work or occupation? 20. In this work, what were your most important duties or activities? Please name up to three. 1) 1st activity 01 2) 2<sup>nd</sup> activity 02 3) 3<sup>rd</sup> activity 03 21. In this job or business, were you mainly: of Self-employed, with or without paid help (alone or in partnership)? 02 Working for pay (including wages, salary, tips or commissions)? 03 Working without pay in a family farm or business? 22. What are the reasons why you have had more than one job since January 1st, 2000? (Interviewer: Do not read list. Mark all that apply.) 01 Needed additional income 02 Personal or family reasons 03 School or training 04 End of temporary, term, contract or seasonal job 05 Other reason Interviewer: Go to Question 34

Now I would like to ask you some questions about the job you worked at for the most hours since January 1st, 2000. 23. What kind of business, industry or service was this? Please be specific. 01 24. What was your work or occupation? 25. In this work, what were your most important duties or activities? Please name up to three. 1) 1st activity 01 2) 2<sup>nd</sup> activity 02 3) 3<sup>rd</sup> activity 03 26. In this job or business, were you mainly: of Self-employed, with or without paid help (alone or in partnership)? 02 Working for pay (including wages, salary, tips or commissions)? 03 Working without pay in a family farm or business? 27. Including the job we just talked about, how many paid jobs have you had since January 1st, 2000? on  $\bigcirc$  One  $\rightarrow$  Go to Question 32 Total number of jobs The next few questions are about this paid additional job. If you had more than one additional job, please answer for the one that you worked the most hours. 28. What was the kind of business, industry or service at this other job? Please be specific. 29. What was your work or occupation? 01 30. In this work, what were your most important duties or activities? Please name up to three. 1) 1st activity 01 2) 2<sup>nd</sup> activity 02 3) 3<sup>rd</sup> activity 03 31. In this job or business, were you mainly: 01 Self-employed, with or without paid help (alone or in partnership)? 02 Working for pay (including wages, salary, tips or commissions)? 03 Working without pay in a family farm or business?

	- Specify

### PART 3 INTRODUCTION

This section of the questionnaire is being asked to people living in Canada's arctic regions.

It was developed through a joint effort by the Inuvialuit Regional Corporation, Nunavut Tunngavik Incorporated, Makivik Corporation, the Labrador Inuit Association, Inuit Tapirisat of Canada, Statistics Canada and Laval University.

The questions focus on household and harvesting activities, personal and community wellness and social participation.

Page 29

#### Section I – HOUSEHOLD AND HARVESTING ACTIVITIES

Interviewer: The questions in section I are to be answered by one respondent per household only. If more than one person 15 years of age or older in this household has been selected to participate in the survey, then the most knowledgeable of these adults should answer the questions.

The first questions are about the work that you and other members of your household do. Please answer only for members of your household who are 15 years of age or older. These questions are for activities done for the year ending December 31st, 2000.

To begin, please give me the first names of everyone who is 15 years of age or older starting with yourself. Please also provide their sex and year of birth.

	Interviewer: Record names at the top of each co		
age follo	QUESTION 1 for all persons 15 years of and older listed in the household. Then w the same procedure for QUESTION 2, STION 3, etc. until you reach QUESTION 8.	PERSON 1 First name	PERSON 2 First name

Somewhat Very • Satisfied ..... 01 🔘 02 🔘 03 🔘 05 ( 06 12. Are you satisfied or dissatisfied with how the territorial or provincial court deals with people who break Is that somewhat or very? Very Somewhat • Satisfied ..... 01 O 02 🔘 03 🔘 05 ( 06 🔾 13. All things considered, are you satisfied or dissatisfied with your life at present in this community? Is that somewhat or very? Somewhat Very • Satisfied ..... 01 () 02 () 03 🔘 05 ( 06 ( ) 14. Thinking of yourself and your household five years in the future, do you think your hunting, fishing, trapping and gathering activities will increase, decrease, or remain about the same? 01 ( ) Increase → Go to Question 15 → Go to Question 16 02 Decrease Remain the same  $\rightarrow$  Go to Question 17 Don't know → Go to Question 17 15. Why do you think these activities will increase? (Interviewer: Do not read list. Mark all that apply.) of There will be more hunters, fishers, trappers and gatherers in the household 02 More mouths to feed (increased household demand for country food) Storebought food will get more expensive/will increase reliance on country food People in the household will get better at these activities People in the household will have better equipment to do these activities People in the household will have more time to do these activities Other - Specify . . . . . . . . 08 09 On't know Go to Question 17

**★** 

16.	Why do you think these activities will decrease? (Interviewer: Do not read list. Mark all that apply.)	
		l
	01 There will be fewer people in the household to do these activities 02 Less mouths to feed/decreased demand for country food	l
		l
		l
	04 O Household members will consume less country food (more storebought food) 05 Fewer resources to harvest/ fish and game becoming more scarce locally	l
	of O If storebought food becomes cheaper	l
		l
	07 Other - Specify	l
	09 O Don't know	
	Now I'm going to ask you about some everyday situations and I would like you to tell me how safe you feel from crime in each situation.	
17.	How safe do you feel from crime walking ALONE in your neighbourhood in the evening? Do you feel	
	01 very safe?	l
	02  reasonably safe?	l
	03 O somewhat unsafe?	l
	04 very unsafe?	l
		l
	05 ○ Does not walk alone → Go to Question 19	l
	06 O Don't know	l
	07 ○ Refused → Go to Question 18	
18.	How often do you walk ALONE in your neighbourhood in the evening?	
	01	l
	02 At least once a week?	l
	03 At least once a month?	l
	04 Never	l
	05 ○ Refused → Go to Question 20	
19.	If you felt safer from crime, would you do this more often?	
	01 Yes	l
	02 O No	l
	03 O Don't know	l
	04 Refused	
20.	When ALONE in your home in the evening, do you feel	
	01 very worried?	
	02 osmewhat worried?	
	03 onot at all worried about your safety from crime?	
	04 Never alone	
	05 Opn't know	
	06 Refused	
		П

<del>\*</del>

21.	In general, are you satisfied or dissatisfied with your personal safety from crime?
	Is that somewhat or very?
	Somewhat Very
	• Satisfied 01 ○ → 02 ○ 03 ○
	• Dissatisfied
	• Don't know
	• Refused 08 (
22.	In the last five years have you ever considered moving out of this community?
	01 Yes
	$\bigcirc$ No $\bigcirc$ Ago to Question 24
	O3 O Don't know
23.	What were your reasons for wanting to move away? (Interviewer: Do not read list. Mark up to 3 reasons. If more than 3 are given, ask for the 3 most important.)
	01 C School/education opportunities
	02 Job opportunities/better job offer
	03 Family moved/to be close to family
	04 () Family pressure/gossip
	05 Wanted a change/to travel/see other places
	06 Community not growing/stopped growing 07 Too much alcohol and/or drugs in the community
	08 Too much violence
	09 Want better health service
	Too expensive in the community/cheaper to live elsewhere
	11 Need to live in an elder's residence
	12 Better housing
	13 Other - Specify
	15 O Don't know

**\*** 

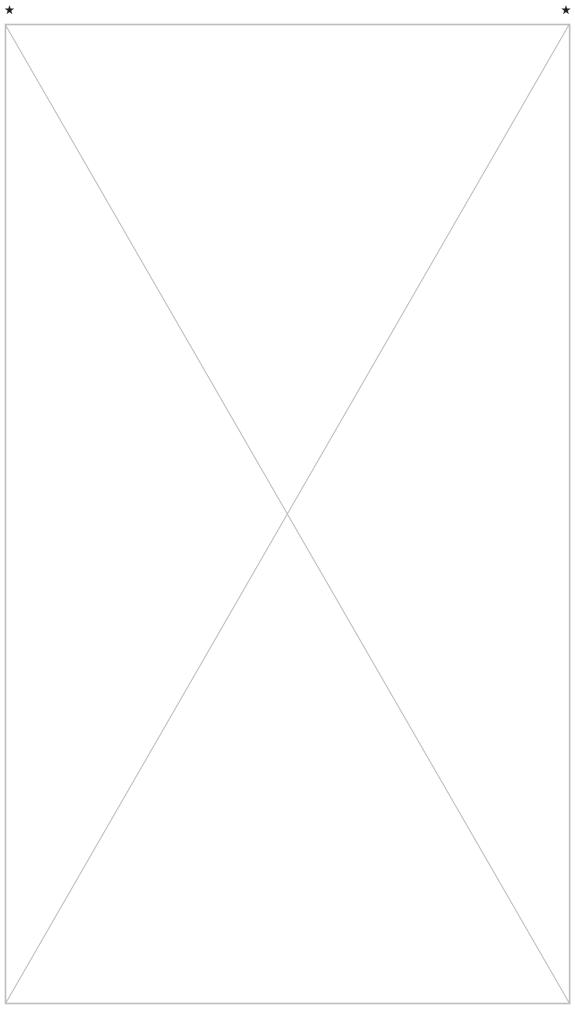

24.	Thinking of your present situation, what are the most important this community?  (Interviewer: Do not read list. Mark up to 3 reasons. If more than 3			
	01 School/education opportunities		,	μ,
